Eucerin Extremely Dry Skin Treatment is uniquely formulated with the skin's own natural moisturiser.

It contains 10% urea, which locks in moisture and has been developed specifically for the treatment of extremely dry skin conditions such as Atopic Eczema, Ichthyosis, and Xeroderma.

And it really works.

Clinical studies have found the moisture content of skin treated with Eucerin increased by up to 42%*.

For more information, please visit our website at www.eucerin.co.uk

Eucerin. As recommended by people who don't have dry skin.

See a lot less people complaining about dry skin.

Eucerin®

THE MEDICAL SKINCARE PROGRAMME

*Eucerin Clinical Study: Efficacy of 10% Urea in patients with Atopic Dermatitis. Source: Z Haukr (1997) 72, 34-39

Information relating to the GSL Licensed Eucerin® Extremely Dry Skin Treatment Cream (PL 14160/0003) and Eucerin® Extremely Dry Skin Treatment Lotion (PL 14160/0004) Eucerin® is a registered trademark. Marketing authorisation holder: Beiersdorf UK Ltd, Birmingham, B37 7YS, UK. Active Ingredients: Urea EP 10% w/w. Directions: Apply sparingly (as a thin film) twice daily to the affected areas of the skin. Indications: For the treatment of Ichthyosis, Xeroderma, Hyperkeratosis and Atopic Eczema/Dermatitis and other dry skin conditions. Precautions: Do not use if sensitive to any of the ingredients in cream or lotion. Do not use on broken, inflamed skin. Do not apply to large areas of skin on patients with renal insufficiency. This cream or lotion could increase the penetration of some substances, such as medicines known as Corticosteroids, Dithranol or Fluorouracil. Avoid contact with the eyes or other sensitive areas. Keep out of reach of children. For external use only. Legal Category: GSL PIL 14160/0003 (Cream) GSL PIL 14160/0004 (Lotion). Pack size and NHS prices: 250ml lotion, £4.40, 50ml cream; £3.61, 150ml cream; £8.88.

For family allergies, Piriton® has it covered

From hayfever to allergic dermatitis, Piriton has the answer. It provides fast symptom relief and the range has a formulation to suit family members from 1 year up. With almost 50 years of experience, you know you can trust Piriton.

PIRITON®
 chlorpheniramine maleate

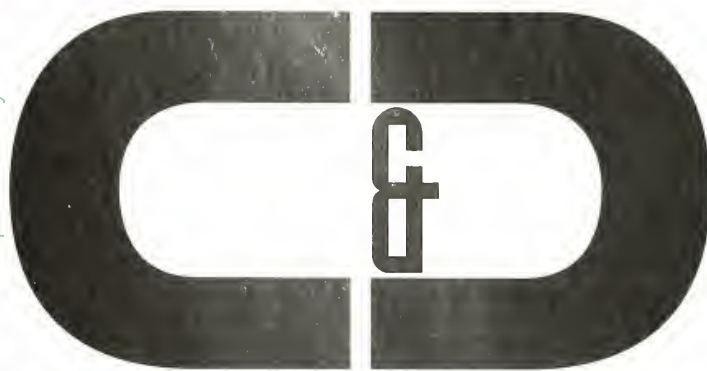

For family allergies

Piriton Allergy Tablets and Piriton Syrup Product Information:

Contraindications: Piriton Allergy Tablets containing 4mg chlorpheniramine maleate. Piriton Syrup containing 4mg chlorpheniramine maleate in 10ml. **Uses:** Symptomatic relief of allergic conditions including hayfever. **Dosage and administration:** Tablets: *Adults:* 1 tablet Every 4-6 hours. *Children aged 6-12:* 1/2 tablet Every 4-6 hours. *Syrup: Adults:* 10ml Every 4-6 hours. *Children aged 6-12:* 5ml Every 4-6 hours. *Children aged 2-6:* 2.5ml Every 4-6 hours. *Children aged 1-2:* 2.5ml, twice daily. **Contraindications:** Hypersensitivity. Concurrent or recent

treatment with MAOIs. **Precautions:** May increase effects of alcohol. May affect ability to drive and use machinery. **Co-existing conditions:** Use with caution in prostate, respiratory, liver, cardiovascular and thyroid disease; epilepsy, glaucoma and other eye conditions. Syrup contains sugar, use with caution in diabetes. Maintain good dental hygiene. **Pregnancy and lactation:** Consult doctor before use. **Side effects:** Sedation. Less commonly gastrointestinal disturbances, blurred vision, headaches, urinary retention, dry mouth, muscular incoordination, jaundice, cardiovascular disturbances, chest tightness, dizziness, blood dyscrasias, allergic reactions and tinnitus. Children and the elderly

are more prone to the neurological anticholinergic effects and rarely may become confused or excitable. **Retail selling price:** Piriton Allergy Tablets 30: £2.85; Piriton Syrup 150ml £3.79. **Legal category:** P. **Product licence numbers:** 0036/0088 (Pirito Syrup). 0036/0091 (Piriton Allergy Tablets). **Product licence holder:** Stafford-Miller Limited, Welwyn Garden City, AL7 3S. Further information is available from Medical and Consumer Affairs, GlaxoSmithKline Consumer Healthcare, Brentford, Middlesex TW8 9GS, U.K. **Date of revision:** December 2000. Members call for SGM

A letter requesting a Special General Meeting to debate the Royal Pharmaceutical Society's proposals for modernisation was presented to the Society's secretary and registrar on Tuesday this week.

Over 40 pharmacists, including past presidents of the RPSGB, have signed the request, which calls for votes on two motions (*see box*). A Society spokesman confirmed receipt of the SGM request and said that the Council members were "being advised".

Young Pharmacists' Group chairman Noel Wicks, who is a signatory and is heading the call for an SGM, suggested that the reason for calling the meeting was the Society's apparent disregard for members' views on its modernisation process.

"Our concern is that the consultation processes so far have been shambolic in the least, have not taken on board what the membership has expressed, there has been no clear majority of opinion to coincide with what the Society's plans are at the moment, and at the end of it all, they [the Society] have managed to sidestep having any kind of constitutionally relevant or significant meeting, which is basically, why we're doing this," he said.

Mr Wicks added that the Society should be spending its

non-regulatory income on member services rather than being used predominantly for regulation. "We want all of the non-regulatory income to go to

[the] membership," he said.

"If you look at branch funding cuts, look at what's happening to the museum, and this is only a start. We are going to see a

contraction of [services] for the members rather than an expansion, and this is our golden opportunity... [to] modernise ourselves to become [not only] a modern regulator but also to become a modern membership organisation," said Mr Wicks.

However, Mr Wicks said that those calling for the SGM were not against lay input into professional regulation.

"We categorically agree that lay membership is a good thing as far as the regulatory side goes, we realise that modernisation is necessary, and the greater lay input into the regulatory functions of the Society is important – that's not what we're arguing about. What we're talking about is that the lay input isn't desirable for the membership representative functions of the Society," he said.

"It's very important to get the [Society's future] structure right because if we put all our eggs in the regulatory basket and, somehow that's taken away from us in future years... what's to say that they [The Council for the Regulation of Health Care Professionals] aren't going to do all the regulating in five year's time, and then what are we left with – a Society that's structured entirely around regulation and that's gone."

The letter says...

Under the provisions of the Society's Byelaws section VI, we require a Special General Meeting to be convened for the purpose of debating the Society's proposals for a new Charter, and specifically to debate the following issues:

1. The Society's proposals for changes to the composition of the Council.
2. The future remit of the Society and how it will perform its duty to maintain the honour and safeguard and promote the interests of the members in their exercise of the profession of pharmacy.
3. The Society's proposals to seek charitable status, the potential effect of this on the Society and its impact on the membership.

4. Whether the assets and funds of the Society should be applied to a body constituted to perform regulatory functions under the provisions of the Health Act 1999.

To vote on the motion: 'This meeting rejects any increase in the proportion of non-pharmacist members of the Council of the Royal

Pharmaceutical Society as such an increase would undermine the Council's ability to maintain the honour and safeguard and promote the interests of the members in their exercise of the profession of pharmacy.'

Following that to vote on the motion:

'This meeting instructs the Council to arrange for a referendum of the entire membership to be held to establish the level of support for any proposed new Charter once the details of any such proposal(s) have been finalised.'

And to vote on other motions related to the issues, which may be proposed during the day. 'We request that the Society convenes the meeting on a Sunday afternoon at a location in central London or central Birmingham, to ensure that as many members of the profession who wish to do so may attend, to book a location that can accommodate a large number of members and for long enough to enable a full discussion to occur.'

Join a Charter roadshow

The RPSGB has announced dates and venues for roadshows where pharmacists can make their views known on the Society's new Charter.

The meetings, starting at 7pm, will be held at:

Cambridge	The Garden House Hotel	6 May
Nottingham	Nottingham Racecourse	7 May
Sunderland	Stadium of Light	27 May
Leeds	Royal Armouries	29 May
Exeter	Crossmead Conference Centre	10 June
Southampton	Southampton Football Club	11 June
Cardiff	Miskin Manor	16 June
Birmingham	Birmingham Repertory Theatre	17 June
Manchester	Mechanics Centre	24 June
Dunblane	Hilton Dunblane Hydro	25 June
London	Royal Pharmaceutical Society Assembly Hall	30 June

President Marshall Davies said: "We are looking forward to going out and talking to the members about our proposals for a new Charter. We know that pharmacists are rightly proud of their chartered status and it is important that we hear as many views as possible. The roadshows will be an important way of engaging our local network in the process."

Those wishing to attend a roadshow should e-mail membershiptemp@rpsgb.org.uk with their chosen venue or write to Esther Corcoran at the RPSGB.

READING THIS OVER-BREAKFAST? IF YOU HAD CYSTIC FIBROSIS THIS IS WHAT YOU WOULD HAVE TO GET THROUGH BEFORE BREAKFAST.

Cystic Fibrosis is an inherited genetic disease that causes the lungs to produce a thick, sticky mucus. Left untreated it would clog up your lungs and asphyxiate you. So you'd face 20 minutes of panting to loosen the mucus enough for you to cough it up. CF also affects the pancreas so you can't absorb vitamins and minerals. In fact your digestive system wouldn't do much at all. So your faeces would be yellow and putrid. Next it's on to your nebuliser. 20 minutes of sitting in a machine of sound and steam to help clear your inevitable chest infections. Now, finally you're ready for today's 60 tablets. And if they don't literally stick in your throat, the fact that living with CF means you probably won't live past 50 certainly will.

09064 0001 34

see off cf

The Cystic Fibrosis Trust, CF, has been raising awareness of the condition this week with a poster campaign asking people to donate 34p each. This is based on the idea that if every adult in the UK donated 34p, the CF Trust would reach a target of £15 million. It believes this is the sum required to help get the first effective cure to people, now that the defective gene has been identified. The adverts, with the catch line 'see off cf', are "different to anything that CF has done before, and we have seen a very positive response already", it says. Details given on the poster explain the symptoms, effects and current requirements for medicines. Donations of 34p may be made by calling CF on 09064 0001 34 or by sending the text message CFTDONATE to 88025. To donate more call 020 8464 7211 or visit www.cftrust.org.uk

Legal powers for mandatory CPD

The Royal Pharmaceutical Society's Council has agreed on legal proposals giving the Society power to require pharmacists to give evidence of their continuing professional development.

The evidence would be necessary for pharmacists' renewed registration at regular intervals, perhaps every three, four or five years, or after a significant change in the person's practice or on return to practice. The Society would remove from the Register pharmacists who, after reminders and help, failed to submit satisfactory evidence.

An alternative would be for pharmacists to agree not to engage in the practice or science of pharmacy or offer pharmaceutical or healthcare advice. Their Register entry would refer to them as a "non-practising" pharmacists or whatever term was agreed. The term "practice of pharmacy" would not be limited to direct patient care.

The aim would be to protect the public while allowing existing members of the Society to remain on the Register and return to practise more readily than might otherwise be the case. The Society feels that the Code of Ethics obligations to ensure competence to practise are not powerful enough instruments to realise mandatory CPD.

The proposals form the elements to be submitted to the Department of Health for a Section 60 Order. The document also gives the Society powers to accredit degree courses and pre-registration training, and to assess the fitness for practice of graduates applying for initial registration. UK schools of pharmacy would have a duty to disclose concerns about a pharmacy student's health status or character if necessary.

The British Pharmaceutical Students' Association will be hosting a conference for pre-registration graduates at the Novotel, Birmingham on April 27. Organised in conjunction with the PPLS, the conference will include presentations on the registration exam and life after qualification. The Young Pharmacists Group hustings for RPSGB Council candidates will take place at the same venue.

POLICY

MPs probe deregulation proposals

OFT officials and pharmacy representatives were questioned by a Health Select Committee last Thursday as part of the Government's inquiry into the OFT's report into pharmacy entry controls.

Committee members, including MP and pharmacist Sandra Gidley, examined issues such as whether:

- deregulation would lead to improved innovation and service delivery
- supermarkets could guarantee longer opening hours in light of pharmacist shortages
- an increased number of

pharmacies would be viable as the global sum would be spread among more pharmacies

- the Government's wider health agenda was at risk
- the OFT's predicted £10 million savings would be wiped out by an increase in funding for the Essential Small Pharmacy Scheme.

OFT economist Matthew Johnson, in response to a question put by Ms Gidley about the shortage of pharmacists, said that he expected a deregulated market to attract more pharmacists from the rest of the world, and that demand would encourage more

people to become pharmacists.

On the subject of the threat faced by rural pharmacies, OFT divisional director Jonathan May said that the ESPS would ensure the protection of such pharmacies, as it could run alongside deregulation.

However, Andy Burnham MP warned that if deregulation was introduced, then more pharmacies would need to be subsidised by the ESPS. He added that currently £4m is spent on ESPS and that any increase would put the OFT's projected £10m savings into question.

Mr May appeared to backtrack

during the debate by saying that the OFT welcomed the Government's initial response and that the OFT never expected the Government to accept its recommendations in full.

A summary of the debate, which also included PSNC chief executive Sue Sharpe, NPA chief executive John D'Arcy, National Co-operative Chemist NHS business development manager Liz Colling and Asda superintendent pharmacist John Evans, has been posted on PSNC's website.

For more information: www.psnc.org.uk

BRM debates Society's roles

Delegates to the Branch Representatives' Meeting will vote on a motion that the Royal Pharmaceutical Society's professional roles must be given equal prominence to its regulatory functions.

West Metropolitan Branch will propose that "the Society should observe the modernisation principles agreed by the Young Pharmacists' Group, the National Pharmaceutical Association and Pharmaceutical Services Negotiating Committee in any changes it recommends to the structure of the Society."

Among the agreed principles are that the Society must be accountable to its pharmacist members for promoting the profession, and for developing professional roles and opportunities. The Society must

be sufficiently independent of the Government to be able to oppose, if necessary, Government policies affecting non-regulatory issues.

Oxfordshire and Hull Branches want the Society to consult fully with the membership about seeking charitable status. The branches believe the advantages and disadvantages have not been fully explained, and that the Society must not give away "the family silver" in the process. The membership, through the Society, must retain ownership of assets such as the headquarters building and publications.

The British Pharmaceutical Students Association will call for an extensive review of medicines packaging, including generics, because of the marked similarities that can lead to dispensing errors and patient confusion. Brighton

Branch wants patient information leaflets to be less frightening and more user friendly.

Harrow and Hillingdon Branch wants the Society's full-time membership fees to apply only to 'active' pharmacists; members employed solely in other trades should pay a reduced fee. The move to mandatory continuing professional development is an opportunity to distinguish between active and non-active members, says the branch, which is also proposing that active pharmacists should be issued annually with a form of identification easily recognisable to employers and colleagues.

Two motions deploring the reductions in branch funding will also be among the 11 motions to be put to the meeting on May 15 at the Society's headquarters.

SCOTLAND

Pharmacy's important contribution

Pharmacists are making a valued and important contribution to maintaining standards of healthcare delivery, a senior NHS executive in Scotland has said.

Dr David Steel, chief executive of NHS Improvement Scotland, singled out audit and the recording of medication errors as being two of the more visible areas in which co-operation was proceeding.

Speaking at the spring meeting of the Royal Pharmaceutical Society in Scotland in Glasgow, he said: "Pharmacists are actively involved in almost all the topic project groups."

NHS Quality Improvement Scotland was created in January 2003 to improve the quality of healthcare in Scotland by setting standards, monitoring performance and by providing advice guidelines and support to NHS Scotland. It brings together five national bodies including the Clinical Standards Board for Scotland and the Health Technology Board for Scotland.

RPSGB census results

The RPSGB has published a summary of the pharmacy workforce census conducted last autumn. Key results show that:

- 16 per cent of respondents are over the official retirement age (60 years for women and 65 years for men);
- 20 per cent of respondents are not in active employment or work outside pharmacy;
- there is evidence of 'portfolio-type' work patterns with 14 per cent of respondents having two or more jobs;

- 31 per cent of respondents are working less than 33 hours a week;
- more than a third of practising pharmacists in the community sector are working as locums.

The census was commissioned to provide information about the current workforce and to analyse trends to inform future planning. All pharmacists on the register last August were asked to take part – the response rate was 86 per cent.

Dr Gillian Hawksworth, vice-president of the Society, said: "The census highlights issues

such as the numbers of pharmacists choosing to practise as locums, the extent of portfolio working and the increasing feminisation of the process."

Further detailed analysis still has to be undertaken and more results will be published over the coming months.

The report is available for £30 from Jackie Moon at the RPSGB.

Questiontime

in association with

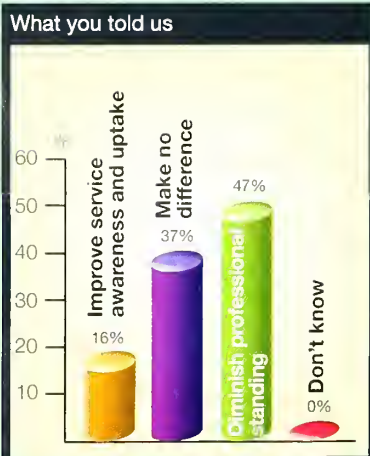

UniChem

Last week we asked you: "Lloydspharmacy is launching a live in-store pharmacy radio station. How will it affect consumers' perception of pharmacy?" You replied (see right):

This week's question: How would you vote in the SGM which has been requested to discuss the RPSGB's modernisation process?

- In support of the SGM motions ● In support of the RPSGB plans
- Want alternative motions discussed
- Would not vote ● Don't know

You can record your vote on our website: www.dotpharmacy.com. You have until noon on April 15 to cast your vote. We will publish the results in C&D, April 19.

C&D Council election poll

C&D is mirroring this year's RPSGB Council elections with an online poll. Readers can vote for seven candidates in our just for fun poll, and an updated summary of the votes cast will appear on our website each Monday and Thursday.

Voting for C&D's straw poll, like the official election, closes on May 16 and the results will be published in the May 24 issue of C&D.

Viagra link to Pharmacy2U

The services of a mail-order pharmacy are being promoted to GPs by a pharmaceutical company.

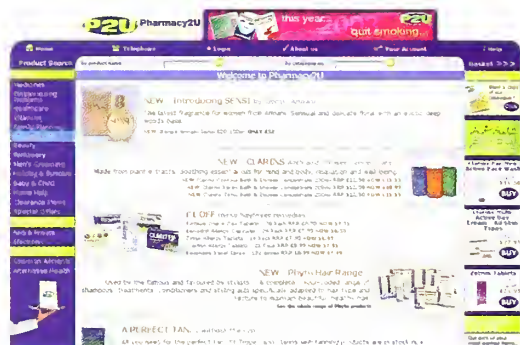

Viagra manufacturer Pfizer has written to GPs suggesting that they can "make life a little easier for men receiving Viagra prescriptions". The letter says that a "convenient and easy" alternative to the "hurdle" of taking their prescription to a pharmacy to collect their prescription is to use the services of Pharmacy2U, the mail-order pharmacy based in Leeds.

The letter from Gavin Gandy, marketing manager for men's and women's health, continues: "The delivery service offers both discretion and the convenience of having Viagra delivered direct, so there's no need to go into a pharmacy."

The letter lists the price that patients with private prescriptions will pay – the NHS list price. GPs are then asked: "Why not order some delivery option leaflets and envelopes to give to them?"

Below Mr Gandy's signature the letter says: "Patients are free to take their prescription to any pharmacy of their choice." This point is emphasised in the information GPs can pass on to patients, which opens: "You are free to take your prescription to any pharmacy of your choice."

The delivery option leaflets are

Pfizer's letter recommends the Pharmacy2U mail-order service, but both companies have denied any business arrangement exists

marked with the Pfizer logo and a freepost envelope is addressed to Pfizer/Pharmacy2U.

Dr Julian Harrison, commercial director of Pharmacy2U, said that there was no link with Pfizer and no business arrangement. "It's their decision," he said. "If the brand have decided they want to offer information to their patients, that's up to them."

"GPs are already aware of Pharmacy2U – we're happy to have the business."

Pfizer said that no special arrangement had been entered into between them and Pharmacy2U. "The purpose of this service is to provide another option for patients with ED," a company spokesman said.

An RPSGB spokesman said that there was nothing to comment on as the letter did not

breach the Code of Ethics or medicine advertising regulations.

But Malcolm Ward, chairman of the Dispensing Doctors Association, was "surprised" at Pfizer. "This is regrettable. If they are trying to get the market lead I hope other companies don't follow – this is not a positive step forward. It could backfire on them – GPs won't take kindly to it," he said.

Lloydspharmacy superintendent Andy Murdock questioned the scheme, saying patient choice was important. While the internet has made access to medicines more convenient to consumers, "it is an impersonal medium that cannot offer the specific advice and on-going patient care as effectively as a face-to-face conversation with a pharmacist".

SURVEY

Boots finds asthma myths rife

More than two-thirds of people think that asthma is a condition associated only with childhood, according to research from Boots and the National Asthma Campaign.

Recognising the symptoms of asthma was also a problem. Of those surveyed, 88 per cent knew that wheezing was a common symptom of asthma but 42 per cent did not realise that a persistent night-time cough or shortness of breath are also symptoms.

Professor Martyn Partridge, chief medical adviser to the NAC, said: "Not only does asthma affect all ages, it can start for the first time at any age. It may be the case that many people have asthma but don't realise it."

The NAC is Boots' charity of the year and they are working together to raise awareness of the condition.

MEDICINES

Methadone information online

A booklet explaining about many aspects of methadone is available free online, after the first edition sold out.

Methadone Briefing, written by community psychiatric nurse Andrew Preston, provides a comprehensive background on the history, research, pharmacology and legal aspects of methadone prescribing.

The book also focuses on the practical assessment, treatment aims, dosages and detoxification for methadone.

Mr Preston has decided to make the book available free to all online as he has been unable to secure the funding, or time, to produce a second edition and there have been many changes since the first edition.

Notes about the important changes are included on the website.

For more information:
www.saferinjecting.org/publications/methadone_briefing/intro.html

'Sex and your health: be safe not sorry' is the latest in-store information leaflet to join Moss Pharmacy's 'Health Today' programme. The free, Durex-sponsored leaflet explains sexually transmitted infections, their symptoms, infection routes and preventative measures

Script volumes to top 600m by 2004

Prescription volumes are expected to increase by around 12-13 per cent, or by around 30 million prescriptions, and will top 600 million by the end of 2003-2004.

By the end of this year, prescription volumes will reach 585m, up 5 per cent on last year, costing the NHS £850 billion, the Government has revealed in its 'Delivering the NHS Plan Expenditure Report 02-03'. By current forecasts, GP and nurse prescribing will increase 11.5 per cent this year at a cost of £650m.

Recognising the significant shift away from price to prescription volume growth in recent years, the report acknowledges the role of effective

prescribing in line with National Service Frameworks and NICE guidance.

Five drug categories now account for half the increased drugs bill in 2002-2003.

These are:

- statins – 20 per cent
- antihypertensives – 13 per cent
- drugs for diabetes – 8 per cent
- drugs for healing ulcers – 5 per cent
- antidepressants – 5 per cent.

Implementing NICE guidance has cost around £216m extra in 2002-2003, the report concludes, citing the £23m spent on Zyban and nicotine replacement therapy for around 1.4 million people.

NO, YOU'RE NOT SEEING THINGS. THE WORLD'S BIGGEST-SELLING¹ ANTIHISTAMINE NOW HAS THE BIGGEST CETIRIZINE RANGE.

Zirtek, the original cetirizine, is still the best-selling antihistamine in the world. And it still leads the way. It's the first and only cetirizine available in packs of 7, 14 and 30 tablets. And it's now also available in a child-friendly solution. But it's not just the range that's grown.

Zirtek is also about to get it's biggest ever TV and radio spend.

With a mammoth advertising campaign and so much choice for your customers, shouldn't your choice antihistamine be Zirtek? And shouldn't you ensure you've enough stock to meet demand?

Phone your Laser Healthcare representative on 01202 780558

ZIRTEK ALLERGY/ZIRTEK ALLERGY RELIEF

INDICATIONS: Film-coated tablets containing 10mg cetirizine hydrochloride. **USES:** Treatment of seasonal and perennial rhinitis and chronic idiopathic urticaria. **DOSAGE AND ADMINISTRATION:** Adults and children aged 6 years and over: 10 mg daily. Children between 2 years of age: either 5mg (1/2 tablet) twice daily or 10mg once daily. In renal insufficiency the dose to 5 mg (1/2 tablet) daily. Zirtek Allergy Relief: Adults and Children aged 12 years and over: 10mg once daily. **CONTRAINDICATIONS:** Hypersensitivity to the constituents, lactation. **CAUTIONS:** To date there are no known interactions. As with other antihistamines avoid excessive alcohol consumption. **SIDE EFFECTS:** Mild and transient drowsiness, headache, dry mouth and gastrointestinal discomfort. Convulsions have very rarely been reported. **USE IN PREGNANCY:** As with other drugs, the use of cetirizine in pregnancy should be avoided. **PACKAGING/PRICE:** Zirtek Allergy: Pack of 14 tablets = £7.95 R.R.P. Pack of 30 tablets = £14.95 R.R.P. Zirtek Allergy Relief: Pack of 7 tablets = £4.45 R.R.P. **LEGAL CATEGORY:** Zirtek Allergy: P. Zirtek Allergy Relief: GSL. **MARKETING AUTHORISATION NUMBER:** PL 08972/0032 **MARKETED BY:** UCB Pharma Limited, Watford, Herts, WD18 0UH.

ZIRTEK ALLERGY SOLUTION

INDICATIONS: Banana flavoured sugar-free solution containing 1mg/ml cetirizine hydrochloride. **USES:** Treatment of seasonal allergic rhinitis in children aged 2 years and over, and perennial

allergic rhinitis and chronic idiopathic urticaria in children aged 6 years and over. **DOSAGE AND ADMINISTRATION:** Adults and children aged 12 years and over: Two 5ml spoonfuls once daily. Children aged 6 to 11 years of age: Two 5ml spoonfuls once daily or one 5ml twice daily. Children between 2 to 5 years of age: One 5ml spoonful once daily or one 2.5ml spoonful twice daily. **CONTRAINDICATIONS:** Hypersensitivity to the Constituents, Lactation. **INTERACTIONS:** To date there are no known interactions. As with other antihistamines avoid excessive alcohol consumption. **SIDE EFFECTS:** Mild and transient drowsiness, headache, dizziness, agitation, dry mouth and gastrointestinal discomfort. Convulsions have very rarely been reported. **USE IN PREGNANCY:** As with other drugs, the use of cetirizine in pregnancy should be avoided. **PACKAGING/PRICE:** 75ml Solution = £5.99 R.R.P. **LEGAL CATEGORY:** P **MARKETING AUTHORISATION NUMBER:** PL 08972/0033 **MARKETED BY:** UCB Pharma Limited, Watford, Herts, WD18 0UH. **For further information please contact:** UCB Pharma Limited, UCB House, 3 George Street, Watford, Herts, WD18 0UH. Kent's lawyers hit back at SFO

Kent Pharmaceuticals is considering lodging a civil action against the Serious Fraud Office, in light of the disclosure by the SFO of documents to the Department of Health.

The SFO documents were seized from six generics companies by police officers and SFO officials in April last year as part of a criminal investigation into suspected overcharging of the NHS. This is based on the activities of companies such as Norton Healthcare (now IVAX), Generics UK, APS, Lagap, Alpha, Ranbaxy, Regent, DDSA, Galen, Clonmel, Goldshield and Kent Pharmaceuticals between 1996 and 2000 (*C&D*, Apr 20, p10).

On December 20, the DoH launched a civil case, claiming that Norton Healthcare and Norton Pharmaceuticals, Goldshield Group and Regent-GM Laboratories conspired to keep the price of warfarin artificially high (*C&D*, Jan 4, p4). Kent Pharmaceuticals was joined in the action on February 11.

Lawyers acting for Kent said

they had serious concerns about the disclosure by the SFO of documents to the DoH for use in the civil claim. They said: "A very selective number of these documents have been used by the DoH who have sought to build a case against the company by implication and association."

This is not the first time Kent has turned to law over the SFO's actions. In November 2002 it applied for leave to seek a judicial review of what it regarded as the unlawfulness of the raids and seizure of documents. The application was refused so Kent has made an application to the European Court of Human Rights and is awaiting a hearing. In a statement the company said it firmly believed there was a serious misuse of power by the SFO and a major affront to the human rights of the affected company directors and their families.

Kent said it was surprised to be named as a party to the DoH's action and totally refutes any wrongdoing. It is currently detailing its defence.

Pharmacy prices pick up

There are positive signs that the market for pharmacy businesses is picking up, property agents are suggesting.

Although the Department of Health has failed to follow the devolved health departments by rejecting out of hand the Office of Fair Trading's control of entry recommendations, agents believe pharmacy values are already recovering.

Steven Spurrier, who runs the Worcestershire-based New Horizons Sales direct property agency, and the new web-based www.sellyourownpharmacy.co.uk site, said that the launch of the OFT enquiry drove pharmacy prices down 25 per cent, and forced many sales off the market.

However, businesses are now beginning to come back onto the market and prices remain solid, he said. He forecasts a possible explosion in the market in the next few weeks.

Sellyourownpharmacy.co.uk, which launched this month (see also p34), has its first instruction.

The site is described by its managers as "a glorified classified advert", and allows vendors to advertise their businesses for no charge. Details listed include the business's employee statistics,

The new website, described as "a glorified classified advert"

local competition, distance to the GP surgery), its dispensing and financial information (estimated turnover and gross profit) and the price sought for goodwill and fixtures and fittings.

For £144 (+VAT) per year, or £84 (+VAT) for six months, would-be purchasers subscribe to up to nine area mailing lists and are emailed with any new instructions. The relevant vendors are also emailed, so subscribers can be contacted directly. As an introductory offer, the subscription also includes three months extra free.

Retail chemists on the brink of failure

One fifth of the UK's retail chemists are now on the brink of business failure and almost a third of the top 98 industry players now have a 'danger' rating.

According to *Plimsoll's Portfolio Analysis: Retail Chemists - third edition, 2003*, this means that balance sheets are straining under heavy debts and that performance in these

companies must change in order to survive.

Analysts blame zero growth, sliding profits and escalating debts for the financial weakness of the sector and recommend that consolidation will become essential as supply continues to outstrip demand.

Almost three fifths of companies have deteriorated

in overall financial strength and one fifth are now loss-making. Over a quarter of companies in this sector failed to grow last year, the company reports.

Plimsoll's report costs £305, but can be bought for £289.75 by *C&D* readers.

UniChem targets more CPI+ members

Wholesaler UniChem is aiming to increase the number of pharmacies joining the Community Pharmacy Initiative Plus (CPI+) scheme by 60 per cent in year two.

It will also be looking at trialing the open display of P medicines in those stores, where it is appropriate and where there is the backing of the pharmacist, head

of marketing Peter Skinner has said.

So far, 250 members have joined the CPI+ scheme, but the aim is for 400 by the end of the programme's second year.

The Office of Fair Trading report into the Control of Entry regulations had slowed the number of pharmacists signing up to the scheme, said Mr Skinner.

But as well as making pharmacies as appealing as possible, CPI+ can help members establish new categories in areas such as woundcare, diagnostics and incontinence, he said.

If all members joined up, UniChem could increase sales by £30 million a year, the company predicted.

It's arrived

What women want is now available for your pharmacy¹

Research shows that 60% of women with thrush have been waiting for a convenient oral capsule from a brand they know and trust.¹ Now Canesten Oral is here. And with expected pharmacy growth of £5 million,² it's a precious new arrival for you too.

Product Information for Canesten® Fluconazole Oral Capsule. Presentation **Canesten Fluconazole Oral Capsule** contains 150mg fluconazole. **Indications:** Treatment of candidal vaginitis, acute or recurrent. Also for treatment of partners with associated candidal balanitis. **Dosage and Administration:** Adults (16 – 60 years): One capsule. **Contra-indications:** Hypersensitivity to fluconazole, related azole compounds or any of the excipients; co-administration with terfenadine or cisapride; pregnancy and breast feeding. **Warnings and Precautions:** Adequate contraception necessary. A physician should be consulted if the patient or partner have had exposure to sexually transmitted disease, or if the patient: has had more than two infections of thrush in the last six months; is taking any medicine other than the Pill; has any disease or illness affecting the liver or kidneys or has had unexplained jaundice; suffers from any other chronic disease or illness; is uncertain of the cause of symptoms;

has abnormal or irregular vaginal bleeding or a blood-stained discharge; has vulval or vaginal sores, ulcers or blisters; has lower abdominal pain or dysuria. In men, medical advice should be sought if: sexual partner does not have thrush; they have penile sores, ulcers or blisters; there is abnormal penile discharge; penis has started to smell; dysuria. Patients should consult their doctor if symptoms have not been relieved within one week. **Side-effects:** Nausea, abdominal pain, diarrhoea and flatulence. Rarely rash, headache, hepatotoxicity and anaphylaxis. **Cost:** £12.50 **MA Number:** PL 00010/0282. **MA Holder:** Bayer plc, Consumer Care Division, Newbury, Berkshire RG14 1JA. **Legal Category:** P. **Date of Preparation:** February 2003. **References:** 1. Data on file, Bayer UK. 2. Data on file, Bayer UK.

Industry calls for NHS to adopt NICE

The healthcare postcode lottery is still alive and well because the NHS is failing to implement guidance issued by the National Institute for Clinical Excellence, according to the president of the Association of the British Pharmaceutical Industry.

"Unless the NHS actually takes up NICE guidance, you've got to ask whether all the effort that goes into the process is worthwhile," said Dr J F Patterson, speaking in London last week.

Patients do not enjoy fast access to new medicines, he said. Although the National Service Framework for CHD has led to a significant increase in the use of statins, they are no longer new medicines.

"Less than one in six medicines prescribed in the UK today were actually launched in the last five years," he told the ABPI's annual dinner. Patents will expire on one in five of today's medicines in the next three years. Generic

competition will save billions of pounds. "Those savings should give the Government plenty of headroom to allow for the quicker introduction of new modern medicines," said Dr Patterson.

Health secretary Alan Milburn paid tribute to the Pharmaceutical Industry Competitive Taskforce (PICTF). Set up three years ago, it has turned out to be an important symbol of co-operation between government and industry, he said.

NICE has not slowed down expenditure on new drugs, Mr Milburn said. It has cost the NHS over £700 million. "There is more that needs to be done. NICE was not set up so its guidance was left gathering dust on PCTs' shelves."

Investment in the NHS has seen 30 million extra prescriptions in the past year, and an £850m increase in the drugs bill. This is year-on-year increase of 14 per cent and there will be similar increases this year, he added.

1. HOLEMERS

AAH LinkScan upgrade

An upgraded version of AAH Pharmaceuticals' LinkScan hand-held barcode ordering system is now available free to existing users. New users can also buy the system for £29.99 – £10 cheaper than previously.

The new version LinkScan includes a new menu system, for

easier and quicker navigation, and an autodial ordering facility – all the improvements have been highlighted by feedback from customers.

Commenting, Geoff Mackay, customer IT and new product development manager, said: "We have quickly recouped our costs

and are now able to pass cost benefits back to our customers."

Since its launch in March 2002 over 300 Linkscan devices have been delivered.

Because of technological advancements, future upgrades are unlikely to require a new device.

Rowlands redesign aimed at removing confusion

Rowlands pharmacies have a new fascia designed to reduce confusion between the Numark and Rowlands branding of the chain.

In the £1 million-plus rebranding programme, all 300+ Rowlands pharmacies will receive the new pharmacy cross design fascia in duck-egg blue. This still incorporates dual Rowlands/Numark branding but overshadows the Numark branding with the word Rowlands.

According to Kenny Black, Rowlands' commercial director: "The new design makes clearer that the pharmacies belong to the Rowlands group, although, as Numark's largest shareholder, we

The Hartford branch, Cheshire, kicked off the on-going fascia make-over programme

are committed to Numark."

The move comes in response to a customer survey highlighting the confusion. The poll shows that around only 5 per cent of Rowlands customers rated the old style stores as attractive, and only

4.5 per cent agrees the chain has a good range of products. However, around 30 per cent feel staff are friendly, 28 per cent that they are professional. Around a quarter of customers feel they get good advice.

OFT report raised at PM's questions

The OFT report on deregulating pharmacies was raised at Prime Minister's question time on Wednesday by Michael Jack, the Tory MP for Fylde.

Making it clear he opposed the report, Mr Jack told the PM there was a 'battle' going on over the threat to the network of community pharmacies "and the remarkable job they do throughout the length and breadth of Britain".

Mr Blair replied: "It is vitally important we maintain the pharmacy network. It's also important, however, that we pay due attention to reports that are given to us about the virtues of competition. I am sure we will strike the right balance between those two objectives."

Manchester mirrors Croydon crime initiative

Greater Manchester is to trial a crime prevention initiative that in Croydon has reduced the number of pharmacy robberies in the area to zero.

Dubbed 'Raid-Control', the initiative involves the implementation of measures designed to bring small retailers up to standard in raid awareness, time delay systems, cash minimisation, tracing systems and image capture. A joint initiative between the police, the trade association for the security industry and representatives from the insurance and retail sectors, the aim is both to deter criminals and generate evidence to secure a conviction. It will run in Manchester for six months, and will be rolled out nationally, if successful. Some 1,800 robberies at business premises took place in Greater Manchester in the year to March 2002.

Including staff training and equipment, the cost of

implementing Raid-Control could reach £2,000, depending on the level of a pharmacy's existing security measures. However, some Croydon pharmacies qualified for funding from Communities Against Drugs budgets and Greater Manchester Police urge interested pharmacists to liaise with their local crime reduction officer over possible funding.

In Croydon, in the six months to June 2002, there were eight violent robberies targeting pharmacies' cash.

However, since introducing Raid-Control in Croydon in June last year, there have been no more robberies. Croydon pharmacist Beran Patel said: "Raid-Control equipment has brought peace of mind and the training has addressed complacency about crime."

www.raid-control.org

Tel: Greater Manchester Police: 0161 856 2255.

SSL sheds medical division to reduce debt

SSL International is to dispose of its medical division and use the money to reduce debt and invest in its consumer healthcare division.

It is also issuing shareholders with its fifth profit warning in two years, ahead of reporting disappointing sales across its businesses. Its head of European operations, Andrew Slater, has resigned.

SSL expects to raise between £200-£300 million from the auction of the medical business which makes surgical gloves and antiseptic products.

The cash will be used to cut the company's current £300m net debt and invest in its consumer division.

But, in a pre-emptive warning ahead of the full year trading update due at the end of this month, SSL reports that difficult trading, particularly in the USA and Italy, could deflate sales by around 3 per cent to the tune of £620m.

Planned efficiency improvements and cost reduction programmes may lessen the effect on group profit, it says.

Moving out of the dispensary and even the pharmacy

Some 50 delegates attended the Institute of Pharmacy Management International's spring conference in York last weekend. Supervision was on the agenda.

The rules affecting whether a pharmacist can leave a pharmacy and still be supervising it were looked at by Joy Wingfield, Professor of Pharmacy Law and Ethics at the University of Nottingham. The requirements for a pharmacist to be in control stem from statute, interpretation of case law and the NHS contract.

Professor Wingfield argued that there are a lot of benefits from having the current arrangements but suggested: "It is possible [to change] and without all that much effort, but the real question is 'do we really want to do it?'."

The least likely and most difficult way forward would be to change the current 1968 Medicines Act. This could take a decade, she suggested and would need a major political will. Having said that, the Act is starting to look like a "patchwork quilt" from all the changes being made.

Professional 'law' is easier to interpret and can be more flexible. "But there are weaknesses," she added. "Part of the problems now with clinical governance are because our own self-regulation processes have not necessarily taken the patient's view into account." They are seen as self-protective, she argued: the Government is keen for the profession to demonstrate how it is not self-protecting and how it is self-regulating for the public good.

She also had concerns about the messages it would send out to the public and young people

considering a career in pharmacy. Pharmacy has spent the last decade telling the public that it can always find a pharmacist in every pharmacy. "It does seem a shame to say 'Well, not always,'" she said.

Supervision was defined in case law in 1943 as "knowing that a sale is taking place and being in a position to intervene". This interpretation, usually seen as the counter assistant ringing a bell to alert the pharmacist, was superseded in 1996 when the Royal Pharmaceutical Society, with the support of the Department of Health, allowed the introduction of counter assistant sales protocols. This was not based on new case law, but was just a reinterpretation. "Nobody really challenged that as the Society, pharmacists and the Department wanted it," she said. "If we can do it once, can we do it a second time or would that be a step too far?"

Personal control is a requirement both for public safety and for accountability. Case law from 1937 is still used to prevent pharmacists running a pharmacy without a pharmacist being present. The Statutory Committee defines what the limits are

as it hears new cases.

As such, when a pharmacist leaves a pharmacy premises, there is a loss of personal control, but not necessarily of supervision. A case in point would be a pharmacist's lunch break. There has been no definition yet of what is an appropriate length for a lunch break. However, Prof Wingfield said that there is advice that if there is an arrangement in place, then it was not unreasonable for the patient to collect a prescription in the pharmacist's absence if the pharmacist has done all the therapeutic and safety checks and given the go ahead for the medicine to be given out.

As for NHS control, "I do not think there's a difference between supervision and direct supervision," said Prof Wingfield. There's no case law and there seem to be no cases of breach of terms of service in this respect. So is it necessary to have a pharmacist if there is no NHS dispensing going on, she asked.

A private individual could change the law or its interpretation, but the risk is if something goes wrong, everybody walks away, she warned. If a patient or customer suffers harm as a result of the pharmacist not being there, would

they prosecute or sue? "Would the Society and Department publicly endorse these arrangements?," she asked. "They did for counter assistant protocols. But if there were some legal action, would the RPSGB and the Department stand behind a pharmacist who chose to take advantage of the reinterpretation?"

"We know information has a big impact on the way medicines are taken or if they are taken," said Alan Jones, head of process excellence and strategic planning support, Janssen-Cilag. "The challenge is in getting it to the patient."

Provision of information is important before treatment, he said, as "many, many people do not seek treatment, and people can die from under-treatment."

Information provided during treatment can also help concordance and compliance, he argued. For example, online support services, such as Zyban or text reminders. "These help keep people motivated," he said. "We will see more of these sorts of thing emerging, not just from the pharmaceutical industry, but also patient groups."

He also argued that it was very important for pharmacy to be connected to health IT, such as the *NHSnet*. "We should think very carefully that wherever pharmacy is practised, it is connected, and it may be necessary to move into the health centre to get connectivity," he warned.

"Our own self-regulation processes have not necessarily taken the patient's view into account."

Senior hospital pharmacist and managing director of Alchemy Healthcare, Ian Harrison, said that there were many areas where primary and secondary care could work together, and highlighted safety. A key example was the sharing of learning from error reporting. The National Patient Safety Agency has been looking at the system Boots' uses for dispensing error reporting and it will be rolling out a standard reporting form, as well as

piloting error reporting in 40 hospitals.

Last week, the NPSA also said it was looking for targets to focus on, for example with regards to oral methotrexate, anticoagulants, recording of allergic reactions, and paediatric dose calculations.

He said that training in medicines information was not being offered to community pharmacy pre-registration students as it was in the hospital sector. As this training is funded across the NHS framework, the community sector could ask to be included, he suggested.

RPSGB Council member Andrew Blunt expands on a range of issues identified as concerns in the Society's modernisation programme

A different view on modernisation

Why should there be more lay members of Council? How do we know that the Government won't accept a lower proportion of lay membership on Council than is being suggested?

The Society has every reason to believe that the Government would refuse to accept proposals with a smaller lay percentage than those the Council has already agreed. While the Government has not made any specific rules on the matter, it has clearly stated that it expects the Society to come forward with proposals for securing an increase in lay membership similar to that being achieved for other health professions' regulatory bodies.

The Council's proposal for the proportion of lay membership (34.5 per cent) is lower than, or the same as, that agreed for other bodies (34.5-48 per cent). Indeed, we don't know yet if our own proposals have gone far enough to satisfy ministers.

The Society can only benefit from increased lay input. If we don't get this right, the Government will impose lay membership on us as it sees fit. Surely it is better for us to be proactive and get proposals in that we believe will meet the need for greater public input and produce a more effective professional and regulatory body for pharmacy? An organisation that puts the patient first has nothing to fear from enhanced lay membership.

Won't an increase in Council membership inevitably increase costs? Firstly, getting the structure absolutely right for its purpose is

more essential to the profession than simply worrying about the cost, important though that is. Furthermore, I don't believe that the cost would need to increase inordinately. We need to look at ways that we can work more efficiently and effectively as an organisation.

Isn't the Council just seeking a new Charter in order to enable it to change the Council's composition, or to obtain charitable status?

Absolutely not. The Council could, if it wished, simply request a change in legislation to alter the Council's composition through a section 60 Order, leaving the Charter to wither away. But we have rejected that option because we want to retain the benefits of chartered status.

The Council is seeking a new Charter because it offers a unique opportunity to reshape the organisation's entire framework of governance in a co-ordinated, coherent way. It also, importantly, will enable us to strengthen the Society's role as a professional

leadership body, something we all value and want to enhance. This is especially important to young pharmacists who may wish to practise their profession differently in the future.

As for the issue of charitable status, it's true that having a Charter that was fit for purpose would support any application we might make to obtain this.

Charitable status can only be in the interests of the members. But such a change would only be a matter of making explicit what is currently implicit: any visitor to the Privy Council's website can see that chartered status in itself implies that such organisations operate for the public good.

Why has an article been introduced into the draft Charter stating that the Society's income and property cannot be distributed to the members?

The draft Charter is simply making explicit what is currently implicit, as part of good governance. It does not change the current situation – the Society's income and property cannot currently be distributed to the members.

Is it true that the Council has not approved the draft of the new Charter?

Absolutely right. The new draft Charter incorporates some of the views of the Council. It is based on an original draft that was drawn up with the help of a member of the advisory steering group on modernisation, a lawyer who is one of the country's foremost constitutional charter experts. But it is still exactly what it says it is –

a draft. That's why we need the membership's comments, to help us get it right. My experience has been that, if you are given a blank sheet of paper, it remains a blank sheet of paper. You get a better response if you issue a draft. It truly is a draft – we're just trying to facilitate the consultation process.

Isn't an SGM the best way to seek views on the Charter?

I don't think so. The Council wants to seek the views of the profession through the widest possible consultation process, rather than simply calling an SGM, which most members would be unable to attend and which would be unlikely to reflect the views of the profession as a whole.

We've also been given to understand that, if the consultation and consensus-seeking was only undertaken through an SGM, the Privy Council would be unlikely to consider that consultation with the profession had been sufficiently wide-ranging.

Will the Council listen to the members' views on the new Charter?

Definitely. The Council will take account of all the feedback received before determining the content of its petition for a new Charter. We want to hear from as many of the membership as possible. One example of how we're going about this is that we've just released £25,000 of funding in order to allow branches to arrange extra meetings on the new Charter over the next few months.

Thousands of pharmacists already use us for their motor insurance

The reasons will be clear. Call us on **0800 216 118** for a quote.

Mutually exclusive for you.

Member of the General Insurance Standards Council

Pharmacy Mutual Insurance
first for Pharmacists

Comment

from the Editor

The Young Pharmacists' Group has submitted a request for the RPSGB to hold a Special General Meeting to discuss modernisation.

Despite the efforts of the Society to make members aware of why it needs to take the tack it does, it has still not convinced a significant proportion of the membership, both young and old. While some say it is only a minority, albeit vociferous, that is against the modernisation proposals, this 'opposition' has been far more successful in putting its point across than Lambeth. It is refreshing, therefore, to see one-time maverick but now potential 'establishment' Council member Andrew Burr enter the debate with an easy to read Q&A article addressing many questions members will have (*see p15*).

However, the timing of this call for an SGM will complicate things. The YPG claims that it has waited for the draft Charter before making a move. But just as pharmacists receive the Council election papers, they will need to consider whether it makes sense to vote for pro or anti modernisation candidates, or to vote at an SGM instead.

A point that has been made by the opposition is that by

fixing the 'modernisation' tag (a la New Labour) to this current stage of the Society's long and noble evolution, any opposition is derided for being 'anti-modernisation' and therefore anti-change. The opposition would argue that it is not against the Society progressing, but is in favour of 'reform', a much better word to encompass what is going on.

What would be appreciated at the SGM would be some frank disclosures of what has been said by the Government about what it wants from the Society's need for reform. It would help if the Government were to go public on the detail of what it expects. It would surely make sense to have a Government spokesman attend just so the membership could get it straight from the horse's mouth.

The opposition would argue that it is not against the Society progressing, but is in favour of 'reform'

Your views

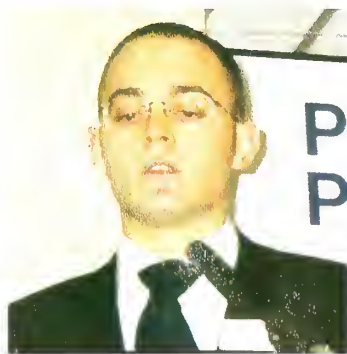

Gavin Miller, Young Pharmacists' Group secretary, explains why the Group has requested a Special General Meeting of the RPSGB

There's more than one way to modernise

Just over a year ago the Society told us that it was looking to reorganise its regulatory structure so that it could embrace the Kennedy Report.

It consulted the members, but it appeared that the results had been predetermined. However, it became clear that the opposition to the Society was widespread and was coming from students and young pharmacists, those at various stages in their careers, many in senior positions in pharmacy organisations and even past presidents of the Society.

The Society wants to concentrate primarily on being a regulator; it will spend not only regulatory income (from retention fees) but also significant non-regulatory income (from publications etc) on a regulatory agenda at the expense of the

Gavin Miller: widespread opposition

membership. It will have a significant number of non-pharmacists and even technicians sitting on the Council deciding our profession's future.

The Society is already harming the membership by imposing cuts in local branch funding,

downgrading our museum and already many quality staff have left. If we allow them to turn their proposals into reality then the membership side of the Society's role will be damaged irreparably.

This is not acceptable. We want a modernised Society that puts equal emphasis on both regulatory issues AND membership affairs, with elected pharmacist Council members at the helm. A seasoned group of members has been consistently telling the Society that it has got it wrong but is ignored. Having conjured up its preferred way forward, the Society is now trying to secure a new Charter to enshrine its plan in our Society's constitution. It alleges that it does not need the support of the members via a vote, just more consultation.

The Society has indicated that

it is not prepared to give the membership a final say – so we have called an SGM to demand a referendum. The Society may say that this is unnecessary because it is arranging consultation meeting to debate the Society's new Charter proposals. These exercises, however, will use as their starting point the Society's current unacceptable position.

They will allow some superficial debate but they will not allow fundamental changes. This is like allowing the members to rearrange the deckchairs on an already sinking Titanic. We have seen enough of the Society's consultation exercises to know that they are not worth a candle and that is why we have organised our own meeting, to challenge the very foundations of the Society's current proposal.

HOSPITAL REPORT

Getting the score right

The dearth of knowledge about the role of pharmacy in the Department of Health is somewhat concerning.

A recent meeting to discuss the job evaluation part of the pay modernisation package demonstrated just how little the people involved in it actually know. The example given was against the mental effort criteria. It was expected that pharmacists could score four on the scale – “frequent spells of intense concentration”. Fair enough? Not for the DoH. “Sorry, but you do not qualify for this. It is meant for a podiatrist carrying out surgery.”

This gives a taste of why the whole process of evaluating and scoring pharmacist posts has been logged by disagreements and why only one evaluation has been published. To make matters worse, the evaluation they did publish was incorrectly scored!

The process fails to recognise the legal responsibilities of pharmacists, the role of the pharmacy superintendent, the

.. the process of evaluating and scoring pharmacist posts has been dogged by disagreements

skills required etc etc. The one published evaluation has seriously dented the morale of hospital pharmacists, who had hoped that their contribution to patient care could be properly recognised and adequately recompensed at long last. That evaluation is possibly quite accurate in its scoring. The fact that half of the post responsibilities are missing means cannot score any higher.

It is not acceptable to hospital pharmacists that the gaps in the system are papered over with a large recruitment and retention allowance, as is currently proposed. The one hope now is that the early implementation phase can sort out the anomalies before too many staff are lost.

Contributed by a senior hospital pharmacist

TOPICAL REFLECTIONS

Election is more important than first appears

So who am I going to honour with my seven votes for what the editor predicts will be the last Council in its present format? I know I no longer have to be concerned about my relative preferences but nevertheless I would like to feel that I was voting for like-minded people.

On analysis of the areas of employment, 66 per cent of the candidates work in the community, with half of these as independent proprietors. The remaining six work in other areas, with two academics, only one from hospital and the remaining three not associated with mainstream practice. Assuming a vote for like-minded opinions, the result is the foregone conclusion of a Council with a heavy majority of community-based members.

So nothing will change because the reality of pharmacy is that community dominates its agenda and will continue to do so. But the editor is concerned that in the new format Council the increased representation from lay members will result in dissatisfaction in the ranks when other stakeholders' interests perhaps take precedent (*C&D comment*, April 5).

This I can understand and is a direct result of the

probable decision of the Royal Pharmaceutical Society wishing to face both ways at the same time by choosing to continue both representing and regulating the profession. The danger is that future Council decisions will be weakened by conflict of interest to the point where it cannot successfully represent the profession.

So this Council election once more concentrates the mind on the future constitution of the RPSGB and the complicated implications of the various alternatives. It is tempting to try and retain both functions under one roof but I consider that the priority for the Society is to represent the profession of pharmacy and if to do this without compromise requires relinquishing the power base of regulation then that is the way I would vote.

So perhaps this year's elections are more important than I at first thought. Each candidate's manifestos will be of utmost importance and if the Young Pharmacists' Group can arrange a representative hustling then so much the better.

I require a Council that sees its priority as representing its members. I will vote for those who support this principle.

Odds on this decision's a loser

The next few months could see some pretty heavyweight negotiations taking place between PSNC and the Department of Health.

Brains cleverer than mine will strain to square the circle of pharmaceutical expectation, patient need and Treasury parsimony but between the brainstorming sessions I wonder whether a little of that intellectual energy might be expended in making my mundane existence a little easier.

PSNC's *Community Pharmacy News* this month may have been politically out of date but on the back page was the latest information on GlaxoSmithKline's decision to change the pack size of Ventodisks (and Becodisks) from 14 disks to 15 and the resulting chaos that it has caused. The new 15-pack is not a special container so I either have to obtain a corrected script for 15 blisters or break bulk and be left with the financial loss of odd disks on the shelf.

I will continue sending patients back to the surgery for new scripts. A little harsh on the patients perhaps but there is no way I am breaking packs. Trying to convince my local surgeries to change their prescribing habits is like getting blood out of a stone. They will only listen when an angry patient returns and demands an end to this nonsense.

But there is another way. When 'Rotacaps' changed to a 112-pack (which by GSK's logic should have been 120) a new 'prescriber authorised' endorsement was introduced so that complete packs could be both dispensed and reimbursed.

In one of the tea breaks that must regularly punctuate negotiations, it should not take more than a couple of moments for PSNC and the DoH to agree to a similar arrangement for 'discs'. Or am I once again naive in failing to understand the intricacies of *Drug Tariff* negotiations?

Medical matters

SARS – new virus identified

Women wearing masks in a Beijing street, where concern over the spread of the virus SARS is growing rapidly

Identification of the virus causing severe acute respiratory syndrome (SARS) has been announced as the Chief Medical Officer issued an update on the disease.

Early online publication of an article in *The Lancet* said that a coronavirus is the most likely cause of the disease.

Researchers from the University of Hong Kong identified a new type of coronavirus from two of 50 patients studied. Subsequently, evidence of virus activity was found in 90 per cent of infected patients compared with none in healthy individuals.

According to *The Lancet*, the

new virus is not one of the two known human coronaviruses and is not like any of the known animal types. More genetic analysis is required but Malik Peiris, a researcher, believes the virus may have originated from animals.

The CMO's public health link, issued on April 7, provides an update for health professionals on SARS including travel advice. Health professionals should be aware of the "evolving situation" and refer to the website for the latest government advice.

Cancer increase set to reach 50 per cent

Worldwide cases of cancer could increase by 50 per cent to more than 15 million within the next 20 years, according to a new report from the World Health Organisation.

The *World Cancer Report* says that the predicted increase in cancer is due to ageing populations, the current trends in smoking prevalence and the growing adoption of unhealthy lifestyles.

However, the adoption of healthy lifestyles could prevent as many as a third of cancers worldwide. This would include:

- reduction of tobacco consumption
- a healthy lifestyle and diet

● early detection through screening, particularly for cervical and breast cancers.

The report also shows that cancer has emerged as a major public health problem in developing countries. The most common cancers diagnosed in the UK are breast (15 per cent), lung (15 per cent), large bowel (13 per cent), prostate (9 per cent) and bladder (5 per cent).

However, the most common causes of cancer deaths in the UK are lung (22 per cent), large bowel (10 per cent), breast (8 per cent), prostate (6 per cent) and oesophagus (5 per cent).

Valerian seems to improve sleep but there is little convincing trial data, says *Professor Edzard Ernst*

Valerian: nature's sleeping aid

More than 200 plant species belong to the genus *Valeriana*. The one used most commonly for medicinal purposes is *Valeriana officinalis*. Its name is derived from the Latin word *valere* (to feel well).

It is a perennial plant, reaching 2-4ft in height, which grows abundantly in Europe and the USA, particularly in damp, swampy areas. Its root has been used for thousands of years for a range of ailments: digestive problems, flatulence, urinary tract disorders, backache, headache, hysteria and hypertension. Its most frequent indication today, however, is insomnia.

Pharmacology

Constituents of the root and rhizome, the parts of the plant used for medicines, have anxiolytic and sedative action. It is still unclear exactly which constituent(s) are responsible for these effects, and the mode of action is not fully understood.

The constituents include amino acids (gamma-aminobutyric acid = GABA), alkaloids, iridoids (valepotriates), volatile oils, phenylpropanoids and sesquiterpenoids. It is likely that more than one constituent accounts for the pharmacological effects of valerian. Most experts believe that its action is mediated via GABA receptors.

Efficacy

The hypnotic effects of valerian have been investigated in several double-blind placebo-controlled randomised controlled trials (RCTs). Improvements following a single dose of valerian extract have been reported.¹ Most studies, however, tested repeated administration.² A recent systematic review of the available

trial data concluded that the evidence was promising, but not conclusive,³ the main reasons being the inconsistency of the results and the methodological limitations of the primary studies.

Two RCTs were published after this review. One trial found valerian to be as effective as oxazepam in enhancing the sleep quality of insomniacs after four weeks.⁴ Donath and colleagues⁵ conducted a small (n=16) RCT with a cross-over design to test the efficacy of both short and long-term valerian (300mg) intake on sleep. The results show no significant effects of acute treatment.

Long-term therapy also produced no effect on objective parameters such as the amount of movement during sleep, although the subjective parameter of sleep latency (time to onset of sleep) was improved with valerian relative to placebo.

Valerian may also be an effective herbal anxiolytic. Unfortunately few clinical trials have tested this hypothesis. One small RCT with 48 patients suggested valerian may reduce situational anxiety in healthy adults.⁶ A recent RCT included 36 patients suffering from generalised anxiety disorder who were randomised to receive one of three possible treatments for four weeks: pure valepotriates (81.3mg daily), diazepam (6.5mg daily) or placebo.⁷ All three groups demonstrated improvements of anxiety scores, and there were no significant differences between the groups. There was, however, a trend for diazepam and valepotriates-treated patients to respond more favourably than those patients receiving placebo. The authors believe that the study

Flower heads and leaves of valerian, a medicinal herb used as a treatment for general neuroses, insomnia, as an antidepressant, even in epilepsy

Continued on page 20 ►

Valerian has a long tradition of being used as a sleeping aid, yet there is surprisingly little convincing trial data to back this up

was too small to reach statistical significance and concluded that "valepotriates may have a potential anxiolytic effect".

Valerian has also been suggested as an antidepressive herbal remedy, but the evidence to back this claim is virtually non-existent.⁸

Dose

The recommended dose range is 400–900mg of extract 30–60 minutes before bedtime, although many preparations on sale through pharmacies use lower doses in combination with other sedatives such as hops and passiflora.

Contraindications

Contraindications for valerian include pregnancy, lactation, known allergy and hepatic impairment.⁹ Care should be taken if driving or operating machinery. In some individuals, valerian has a paradoxical

effect, that is, it acts as a stimulant rather than a sedative.¹⁰

Headache and gastrointestinal symptoms have occasionally been reported after valerian intake. Morning hangover was also observed but RCTs have found no impairment of reaction time or alertness the morning after valerian intake. Hepatotoxicity has been reported from herbal preparations in which valerian was combined with other herbs including skullcap.^{9,10}

Symptoms of tachycardia, nausea, vomiting, dilated pupils, drowsiness, confusion, visual hallucinations, blurred vision, cardiac disturbance, excitability, headache, hypersensitivity reactions and insomnia have been reported following acute overdose, with full recoveries made in all cases.^{9,10}

Potentiation of the effects of sedatives, hypnotics or other central nervous system

depressants is theoretically possible at high doses.¹⁰ RCTs have shown no risk of potentiation with alcohol.

The composition and purity of valerian extracts vary greatly. Standardised extracts often use valepotriates as the marker substance although valerenic acid is considered more reliable because of better stability. Aqueous extracts are devoid of valepotriates.

Conclusion

Considering the long traditional use of valerian as a sleeping aid, the lack of convincing trial data is perhaps surprising. Rigorous clinical studies testing its efficacy are urgently required. The evidence available to date, even though far from compelling, makes it likely that valerian does improve sleep in patients with insomnia.

Now that kava-kava has been banned in the UK, many patients

will be in search of another herbal anxiolytic. The question of whether valerian is effective in reducing anxiety is presently not answerable. The studies published to date are too few, too small and too inconclusive to provide even a tentative answer.

Giving the best advice about bedwetting

CAUSES AND SOLUTIONS

Bedwetting has a number of causes, but parents in the UK tend to cite the primary reason as sleeping habits (such as deep sleep or irregular sleeping patterns) and the secondary as medical or hereditary factors (bladder capacity or weak muscles)*.

There are a few physical-centered coping mechanisms such as the waking method, the enuresis alarm, the reward chart and a prescription drug. Furthermore a mechanic that balances the emotional wellbeing of the patient and the physical factor is pyjama pants. They help avoid the embarrassment associated with the problem and can be used in conjunction with the other methods outlined above or on their own.

* Omnibus survey commissioned by Kimberly-Clark October 2001

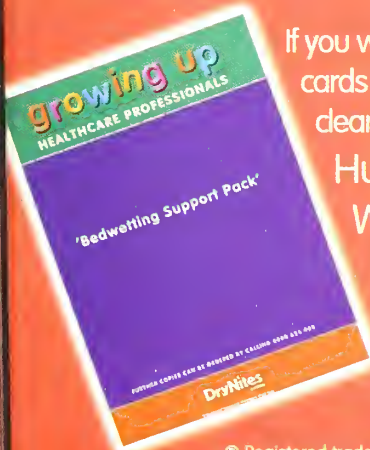

THE BENEFITS OF PYJAMA PANTS

- Discreet and protective, they take away the discomfort and embarrassment normally associated with wet sheets.
- Children are able to build up lost confidence and independence by wearing pyjama pants.
- They can control putting the pants on and removing them in contrast to the lack of control they feel over bedwetting.
- Bedwetting can feel like a never ending daily cycle but absorbent pants offer the chance to break the cycle and start again.
- Pyjama pants allow children a degree of normality in their everyday lives. e.g. whether they are staying over at friend's houses or going on school trips which would otherwise be difficult or potentially embarrassing.

If you would like to receive a DryNites Support Pack which includes patient leaflets, helpline cards and information that offers advice on bedwetting then please send a postcard clearly stating your name, address and telephone number and quote DN2003017 to:-

The latest official guidance on schizophrenia emphasises the need for patient consent, both in medication and other aspects of care

Schizophrenia: choice is the key

Professionals must fully appreciate that schizophrenia can affect people's ability to make judgements, to recognise that they are ill, to comprehend what professionals say to them, and to make informed decisions about their care, according to new guidance.

The concept of patient choice even extends to the point where patients can no longer choose for themselves. 'Advance directives' enable them to have treatment preferences written into their care plans, so that when they are too ill to decide, the care team will know that they would rather have drug A than drug B.

The *Full national clinical guideline on core interventions in primary and secondary care* was developed by the National Collaborating Centre for Mental Health (CCMh, April 5, p23). It incorporates the National Institute for Clinical Excellence's schizophrenia guideline, published last December, and NICE's guidance on atypical antipsychotics published in July 2002. The NCCMH is one of NICE's seven collaborating centres, set up to develop clinical guidelines on the treatment of diseases or conditions.

Peter Pratt, a pharmacist on the team producing the full guideline, believes pharmacists should be aware of its recommendations when helping patients make informed choices about treatment, particularly as some patients might prefer the pharmacist's "no strings attached" approach to a discussion with a doctor.

Although NICE guidance is included in the document, there is no recommendation to choose the cheapest drug when all else is equal. There is rarely a situation where all else is equal, because the patient will usually have a preference that should be taken into account, says Mr Pratt, chief pharmacist, Doncaster and South

Humber NHS Trust and Community Health Sheffield NHS Trust.

A team of healthcare professionals, service users, carers and researchers developed the full guidance after careful consideration of the best available evidence. The recommendations say that:

- assessment of patient needs should cover medical, social, psychological, occupational, economic, physical (including health promotion) and cultural issues
- all people with suspected or newly diagnosed schizophrenia should be referred urgently to secondary mental health services for assessment and development of a care plan
- during an acute episode, patients should make an informed choice as to the medication they prefer. An atypical antipsychotic should be prescribed if the patient cannot make a preference known
- the oral atypical antipsychotics amisulpride, olanzapine, quetiapine, risperidone and zotepine should be considered as first-line treatments in newly diagnosed schizophrenia, using a dose at the lower end of the standard range
- these drugs should also be considered for people who are experiencing unacceptable side effects on conventional antipsychotics, even if their symptoms are well controlled. This decision on what is "unacceptable" should be taken following discussion between patient and clinician. But if good control is achieved without unacceptable side effects on a conventional antipsychotic, there is no need to change as a matter of course
- the dosage of conventional antipsychotic medication for an acute episode should be the minimum effective dose and in the range 300mg-1,000mg

Advance directives enable sufferers to have treatment preferences written into their care plans, so that when they are too ill to decide, the care team will know that they would rather have drug A than drug B

chlorpromazine equivalents daily for at least six weeks. Reasons for dosage outside this range should be justified and documented

- massive loading doses of antipsychotic medication ("rapid neuroleptisation") should not be used
- given the high risk of relapse after an acute episode, clinicians should discuss with patients and carers the continuation of antipsychotics for one or two years
- withdrawal should be gradual, with regular monitoring for signs of relapse for at least two years
- as with acute episodes, in relapse prevention the individual and clinician should jointly decide on the choice of drug, after an informed discussion of the relative benefits and side effects. Oral atypical antipsychotics should be considered for people experiencing unacceptable side effects from conventional treatments
- targeted, intermittent dosage

maintenance strategies should not be used routinely in place of continuous dosage regimes because of the increased risk of symptom worsening or relapse. However, such strategies might be considered for service users who refuse maintenance or for whom some other contraindication exists.

Other sections look at depot antipsychotics, rapid tranquillisation and treatment-resistant schizophrenia.

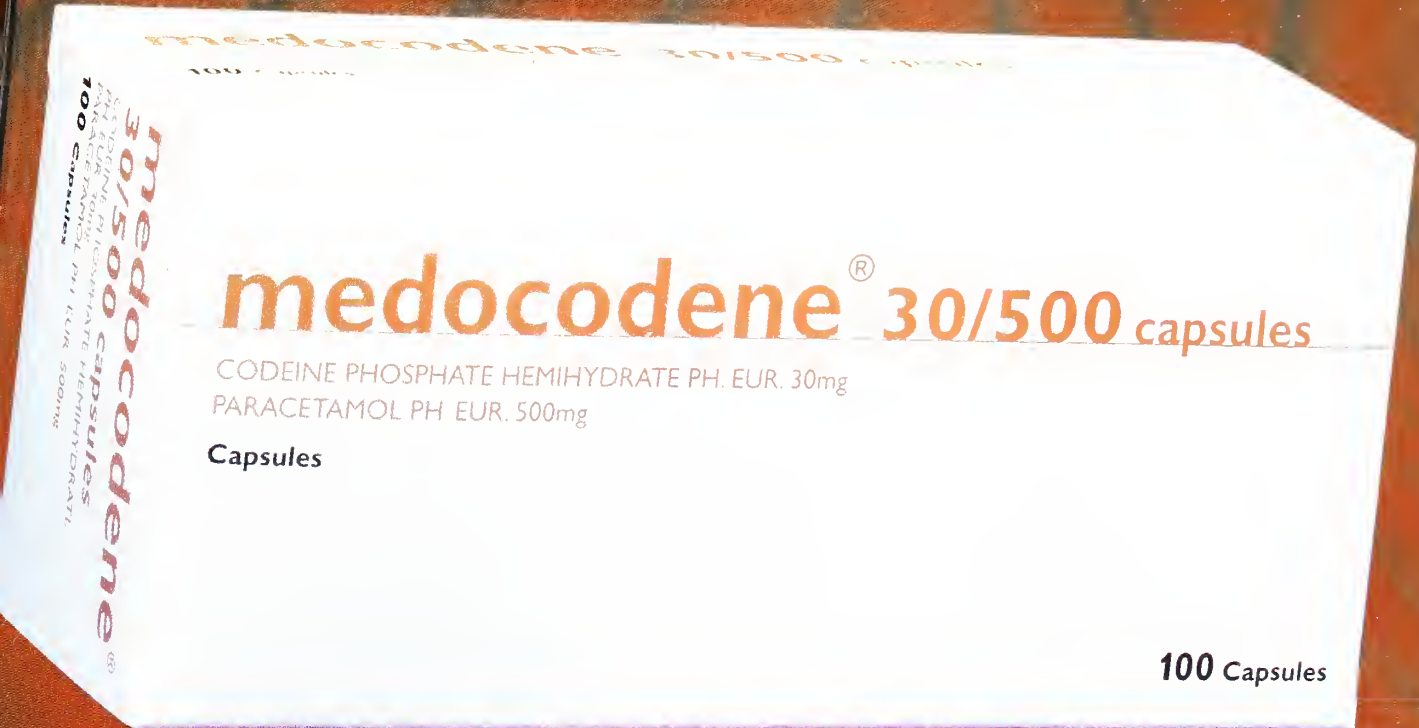

The NCCMH is currently developing guidelines on eating disorders, depression, self-harm, post-traumatic stress disorder and obsessive compulsive disorder.

A new schizophrenia training website is available on www.rcpsych.ac.uk/cru/sts/index.htm The full guideline and CD-ROM are available (£50) from Gaskell Press on 020 7235 2351, ext 146.

THE COLLEGE OF
PHARMACY PRACTICE

This tutorial has been designed to meet the requirements of the College of Pharmacy Practice in providing one hour of postgraduate education towards the College's continuing education requirement

Emollients play an important role in treating dry skin conditions. Regular and frequent use is needed for treatment regimes to be effective. This tutorial revises the causes of the condition and its management

Objectives

- To understand the causes of dry skin
- To appreciate the significance of emollient therapy in dry skin conditions
- To understand the role of urea in dry skin
- To revise how emollients should be used
- To revise common emollient ingredients

Emollient therapy

The word emollient comes from the Latin *emollire* which literally means "to soften" or "soothe".

Emollients soothe, smooth and hydrate the skin and can be used in all dry or scaling skin conditions.

Emollients should be used at least twice daily as their effects are short-lived. Even when a skin condition such as eczema has improved it is important that emollients are used regularly to keep the skin in good condition and reduce the risk of recurrence.

Dry skin

Many people suffer from dry skin, with varying degrees of severity. The condition of the skin is influenced by internal and external factors.

Internal Factors

- Genetic predisposition
- Hormonal influences
- Biological skin ageing
- Illness

External Factors

- Climate and environment
- Sun damage
- Chemical influences
- Therapeutic treatments
- Nutrition

The skin consists of two main layers: the epidermis and below it, the dermis. There are sub-divisions within these two main layers.

The epidermis is composed of layers of tightly packed cells called keratinocytes. They are formed at the bottom of the epidermis (stratum basale/germinative layer) and gradually migrate upwards to the outer layer (stratum corneum/horny layer) where they lose their nuclei and are shed.

Lipids produced within the epidermis hold the lower third level of the stratum corneum firmly together, much like bricks and mortar, and this prevents water loss from the skin. This hydrolipid film (the "mortar") contains natural moisturising factors (NMF) that help the skin to retain water. NMF's include: urea, organic acids, ions, lactic acid, amino acids and epidermal lipids.

In healthy skin the cells of the stratum corneum have a high water content so swell and press tightly against one another, also helping to form a protective barrier.

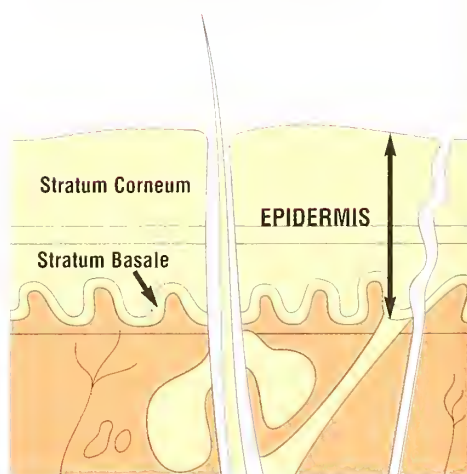

Dry skin is the result of excessive and/or abnormal water loss from the skin. External and internal factors reduce the effectiveness of the epidermal barrier, meaning water is lost and the cells in the stratum corneum shrink and move apart, leaving spaces in between. Not only is water lost more easily from the skin but, in this dehydrated state, it is easier for pathogens and allergens to enter the skin.

In eczema, a disturbance in the metabolism of fatty acids in the epidermis leads to qualitative

changes in the lipids, thereby reducing the effectiveness of the barrier.

Dry skin conditions are especially common in children under 10 and people over 60. Between 15-20 per cent of the population are prone to dry skin due to atopy (sensitisation). Between the ages of 10 and 60 dry skin is more common in women than men.

Cross-section of skin

The role of urea

Urea is a soluble humectant – a water-binding substance that is capable of retaining large amounts of water, relative to its molecular weight. In the skin, urea and lactic acid, another humectant, help to keep the skin smooth and supple by retaining water. In healthy skin urea forms about 7 per cent of the total NMF's in the stratum corneum. It is produced during the keratinisation process as an end product of the decomposition of arginine, an amino acid.

In dry skin the concentration of urea is significantly reduced, leading to a loss of water from the skin. Urea levels are reduced by 40 and 50 per cent respectively in psoriasis and dry skin and by up to 85 per cent in atopic eczema.

Applying urea directly to the skin increases its moisture binding capacity. The skin is rehydrated and softened, reducing skin cracking and roughness. Urea is also thought to help reduce irritation and inflammation and enhances the penetration of other substances applied to the skin, eg corticosteroids.

Urea used in creams such as Eucerin is synthetically produced and has not come from any animal or human source. It is not toxic, unlikely to cause allergies and is colourless and odourless. The Eucerin range contains products with different concentrations of urea suitable for different degrees of skin dryness. A lotion with 3 per cent urea in a water-in-oil (w/o) emulsion is

Test your understanding

Common emollient ingredients that may occasionally cause sensitivity

- Benzyl alcohol
- Cetostearyl alcohol
- Fragrances
- Wool fat and related substances including lanolin, propylene glycol

for normal dry skin or maintenance of dry skin conditions. For the driest skin there is a w/o emulsion lotion or cream with 10 per cent urea.

Studies have shown the penetration of urea depends on the vehicle in which it is contained. When urea is incorporated in a w/o emulsion the penetration is much deeper, although the release of urea from the vehicle may take longer than from oil-in-water emulsions. The therapeutic efficiency of urea in water-in-oil emulsions is enhanced by the occlusive effect of this type of emulsion.

Management of dry skin

The choice of emollient will depend on the degree of skin dryness. It may also depend where and when the emollient will be applied and patient preference.

Regular use of emollients to keep the skin in good condition has been shown to reduce the need for steroid creams. Emollients are very safe and cannot be overused.

Emollients can also be used prophylactically. Regular and liberal use of emollients may mean patients use 500g weekly: this is correct and not excessive.

When beginning emollient treatment patients should be encouraged to try a variety of products to find the one that suits them best. Although emollients are meant to rehydrate skin, it is still possible that people might be allergic to some of the ingredients. This might show up as an "eczema" type reaction.

Emollients should be applied five or 10 minutes after a warm bath when the skin has cooled. The skin should be patted dry, not rubbed, to help reduce itching. The water content of the skin is at its highest after a bath, and applying an emollient at this time will help to retain water. As with

other skin preparations, emollients should be applied in the same direction as the hair lies on the skin.

If patients are using steroid creams they should not apply them for at least an hour after the emollient as their effects may be diluted.

Emollients may be one of two types:

- ointments – heavy oil-based preparations, eg white soft paraffin;
- creams – lighter blends of oil, water and emulsifiers eg aqueous cream.

Emollients in combination with an antibacterial should be avoided unless infection is present or re-occurs frequently.

Bubble bath, cosmetics or highly perfumed products can aggravate dry skin conditions and should be avoided. Specialised bath additives such as Eucerin Therapy or Balneum can help to keep the skin moisturised but they can make the bath slippery. The use of an anti-slip mat may be a wise precaution. Emollients such as aqueous cream may also be used as a soap substitute.

When to refer

It is important to counsel patients on the correct use of emollients so that they are seen as a significant part of their treatment.

Patients with eczema that is infected should be referred to their GP for topical or even systemic antibiotics.

Where emollients are being used in psoriasis it is important to check the patient is receiving other products prescribed, as new POMs can help to control the condition very effectively.

For further information

Pharmacists should refer to the *BNT* for guidance on the use of emollients in the first place.

Useful websites include: www.bad.org.uk (The British Association of Dermatologists) and

www.talkeczema.com. Two years ago (*C&D* June 16, 2001)

published an Update article called *Getting the Dosage Right*, written by Christine Clark. This can be accessed at www.dofpharmacy.com/up1204.pdf

may potentiate the release of active substances from topical preparations and their penetration into the skin. This is known in particular for corticosteroids, dithranol and fluorouracil. Side effects: Local skin irritation may sometimes occur if the product is applied in acute inflammatory skin conditions or to sensitive skin. Overdose: Excessive topical use may cause skin irritation. This tends to resolve quickly when use is discontinued. Accidental ingestion is unlikely to produce toxic effects – oral doses of up to 100g/day urea (equivalent to six 150ml tubes) are considered safe. Legal category: GSL. Pack sizes: Cream 50ml, 150ml, lotion 250ml. Marketing Authorisation: Cream PL 14160/0003. Lotion PL 14160/0004. EUCERIN EXTREMELY DRY SKIN TREATMENT CREAM AND LOTION Prescribing Information

Indications: For the treatment of ichthyosis, xeroderma (especially in the elderly), hyperkeratosis and other chronic dry skin conditions such as atopic eczema (dermatitis). Presentation: Cream and lotion contains urea EP 10% w/w. Administration: Apply sparingly twice daily to the affected areas of skin and rub in. Do not allow to come into contact with the eyes or mucosae. Duration of use depends on the particular condition of the skin and should be established on an individual basis. Contra-indications: Should not be used in patients with a known hypersensitivity to any of the ingredients. It should not be used to treat excoriated acute inflammation of the skin. It should not be used on large areas in patients with renal insufficiency. Warnings: A doctor should be consulted if symptoms persist. Interactions: Urea

Cervical cancer and the Pill

Women who use oral contraceptives for an extended period of time are at a higher risk of cervical cancer, according to a survey published in *The Lancet*.

However, authors of the systematic review stress that more research is needed to assess the extent of the increased risk after they have stopped taking the Pill.

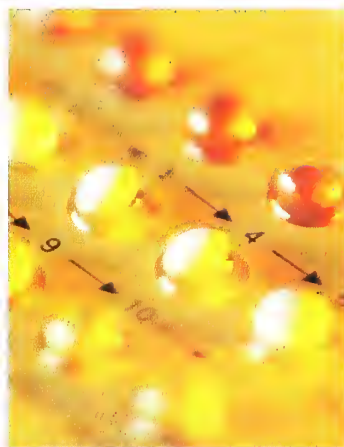

Although infection with the human papilloma virus is thought to be a major cause of cervical cancer, oral contraceptives have been suggested as increasing the risk in women infected with HPV.

The review looked at data from 28 published studies, including more than 12,000 women with cervical cancer.

These showed that, compared with women who had never used hormonal contraception, the relative increase in risk was:

- 10 per cent for less than five years' use;
- 60 per cent for five to nine years' use;
- more than 100 per cent for 10 years or more.

The results were found to be similar for all types of cervical cancer and across studies that adjusted for infection with HPV, number of sexual partners,

cervical screening, smoking or use of barrier contraceptives.

Further research is planned to re-analyse the data to see if the level of risk of cancer can be determined relative to the time the hormonal contraception was stopped.

- Conventional cervical smear testing has been shown to be more reliable and less likely to give false positive or false negative results than the new monolayer cytology, even when combined with testing for HPV.

Anti-coagulant may eliminate monitoring

A new anti-coagulant treatment currently undergoing Phase 3 trials may eliminate the need for INR monitoring in patients.

Ximelagatran (Exanta) has been compared with warfarin for the prevention of stroke and systemic embolic events in patients with atrial fibrillation. In the body, ximelagatran is converted to its active metabolite melagatran which binds reversibly to the active site of thrombin, preventing the conversion of fibrinogen to fibrin.

The Sportif III trial was a randomised, open-label, parallel group study in more than 3,400 people with chronic non-valvular AF. Patients received either ximelagatran 36mg twice daily or dose-adjusted warfarin with a target INR of 2.0-3.0. Results showed ximelagatran was superior to warfarin in preventing strokes

and was also associated with a slightly lower incidence of major and minor bleeding events.

Professor Gary Ford, director of the Freeman Hospital Stroke Service in Newcastle upon Tyne and a principal investigator for the study in the UK, said: "These are important study results that are very promising for stroke prevention. Doctors and patients would welcome a new treatment that is as effective as warfarin in preventing strokes but does away with monitoring and unpredictable dose adjustments. So far, ximelagatran appears to have no major interactions with food, alcohol or other drugs."

Ximelagatran, a direct thrombin inhibitor, is due to get a license in the UK later this year for the prevention of post-operative deep vein thrombosis in hip and knee surgery.

Memantine for Alzheimers

Memantine (Ebixa) has been shown to reduce clinical deterioration in moderate to severe Alzheimer's disease.

In a small study reported in the *New England Journal of Medicine* 181 patients completed a 28-week randomised trial of 20mg memantine or placebo. Those taking memantine were shown to

have better outcomes in scales measuring the severity of dementia than those on placebo. The authors say the results cannot be compared with studies of other anti-dementia drugs as these were in patients with only mild to moderate Alzheimer's.

New triptan lasts all day

A long-acting triptan for the treatment of migraine headaches has been launched by Menarini Pharmaceuticals this week.

Migard (frovatriptan 2.5mg), which has a half-life of about 26 hours, is indicated in adults for the acute treatment of the headache phase of migraine attacks with or without aura.

The recommended dose is 2.5mg to be taken as early as possible after the onset of a

migraine attack, with water. A second dose for the same attack should not be taken, as no benefit has been shown.

However, if the migraine recurs after initial relief, a second dose may be taken, providing there is an interval of at least two hours between the two doses. The total daily dose should not exceed 5mg.

Contraindications include a history of MI, ischaemic heart disease, and peripheral vascular disease, severe hepatic impairment, moderate to severe or uncontrolled mild hypertension.

Concomitant use of Migard with ergotamine and ergotamine derivatives and other 5HT₁ agonists is contraindicated. Concomitant use of Migard with MAOIs and St John's Wort is not recommended, while concomitant use with SSRIs, fluvoxamine and oral contraceptives requires caution.

Common undesirable effects include dizziness, headache, somnolence, nausea, dry mouth, abdominal pain, fatigue, a sensation of abnormal temperature, throat tightness, skeletal pain and increased sweating.

Price: £17.70

April NCSO endorsements

The Department of Health and the National Assembly for Wales have agreed to allow NCSO endorsements for the following items for April 2003 prescriptions:

- Ketoprofen 100mg BP capsules (56)
- Morphine Sulphate 30mg BP suppositories (12).

Elastoplast muscles in on the sports market

Sportspeople are being targeted by Elastoplast's new range of muscle and joint supports comprising elasticated bandages, neoprene and strapping as well as a pain relieving cold spray.

Elastoplast Sport has been endorsed by the National Sports Medical Institute and its focus is prevention, protection, support and rehabilitation.

Three adjustable supports made from wetsuit technology neoprene give support to weak areas and

keep muscles warm by retaining body heat. The knee (£16.99), ankle (£14.99) and wrist (£12.99) supports are all made with adjustable Velcro so one size fits all.

The same bodyparts also get support from the new elasticated range (£8.59, £9.99 and £7.49) which gently compresses joints to prevent and protect strains and sprains.

Complementing the supports are Elasticated Adhesive Bandages

(EAB) which provide support for athletes needing to make awkward movements (5cmx3m £4.79, 7.5cmx3m £6.29) and Rigid Strapping Tape (£7.49) which limits excess joint movement.

The Cold Spray (125ml £4.49) can be applied immediately after accidents or injuries to help reduce pain and swelling with its added soothing menthol.

Bold new direction for Aquafresh

Taking a "bold new direction both for the brand and for the oral care category", Aquafresh toothpaste comes alive in a 30-second TV commercial.

Nicknamed 'Aquatastic', the animated ad uses computer generated graphics to create an underwater world using visuals reflecting the brand's red, white and blue stripes.

The keywords 'fresh', 'clean' and 'protects' punctuate the marine images and the main message is that 'Aquafresh delivers a great, invigorating sensation for your mouth'.

GlaxoSmithKline Consumer Healthcare says its £2.1 million campaign spend marks the beginning of a 'significant investment' in its toothpaste and toothbrush brand.

The TV ad will be supported by a high profile launch including a three-month radio campaign.

Durex gets to the point

Condom brand Durex is aiming to increase its visibility in pharmacies with an exclusive new point of sale unit. Compact enough to be stored on counter tops, the unit displays Durex's new sub-brands Performa and Sensation.

Performa contains a small amount of cream which is said to delay the man's climax and prolong excitement, while Durex Sensation has more than 500 raised circular latex bumps along the shaft and is designed for greater stimulation.

Pregnacare range stretches to new cream

Vitabiotics is extending its Pregnacare brand with a new cream to help protect stretching skin.

Formulated with vitamins C and E and botanical extracts including Calendula and Evening Primrose Oil, Pregnacare Cream is claimed to provide essential ingredients to 'nourish, moisturise and heal' stretching skin. It can also be used post-natally to help keep contracting skin supple.

Pregnacare is currently best known for its prenatal multivitamin, but

brand manager Alpana Chakravarti says she hopes the introduction of the cream will "take the brand into a new direction as we look to move beyond supplements to meet the demands of our consumers".

As part of an ongoing marketing campaign for the brand, the launch of Pregnacare Cream will be supported by poster and tube advertising, web promotions and public relations activity, including sampling at the

Birmingham and London Practical Parenting Baby Shows.

Price: £5.95

Pack size: 100ml

White nights rescued by dandruff shampoo

With a unique poster campaign featuring UV technology, Head & Shoulders shampoo is picking out night owls with flaky shoulders.

The huge banners – measuring up to 40x10m – feature a bottle of Head & Shoulders Refresh with Natural Menthol encased in a block of ice with the strapline 'the coolest way to get rid of dandruff'.

The company says: "UV light has always been the ultimate torture test for dandruff sufferers." And it is cashing in on the medium by replacing standard strip lighting over the posters with UV light which illuminates areas of the design where UV ink is used.

The message is aimed at 15-24 year olds.

Head & Shoulders marketing director Gill Whitty-Collins says of the campaign: "We're always looking for innovative technologies which not only support our campaigns but have a relevant fit with the product."

"The UV technology is not only a subtle reminder to the UK's youth to ensure their tops are dandruff-free and UV-proof, it also illuminates the shards of ice surrounding the bottle, reinforcing the extra cool sensation you get if you use Refresh with Natural Menthol."

Colgate bites into sensitive market

Colgate is planning to take a bite of the sensitive toothpaste market with the May 22 launch of Colgate Sensitive Toothpaste.

According to the company's research, 43 per cent of toothpaste buyers either suffer with sensitive teeth or have a family member who does. The company says: "This area of the market has been neglected in terms of consumer choice and product delivery."

A multi-million pound launch programme will include national TV advertising and billboard campaigns, supported by a professional dental PR programme

and national consumer sampling. In-store promotions and point of sale will help drive awareness.

In July, Colgate will launch a Sensitive Toothbrush – with tightly packed, ultra-soft tapered bristles – to complement the campaign.

The new Colgate toothpaste contains potassium salts to "calm tooth nerve ends and give long-term sensitivity protection".

Price: Colgate Sensitive Toothpaste, 50ml £1.49, 75ml £1.99, 100ml pump £2.59. Colgate Sensitive Toothbrush £2.49

Bo Verstand, Mi&I/Science Photo Library

Thrush affects both sexes but it is only now that penile thrush has gained recognition as a condition in its own right.

Men with penile thrush, a condition medically referred to as balanitis, can now be treated over the counter with oral fluconazole if their partners have been diagnosed with vaginal thrush. Although the incidence of 'associated balanitis' is lower than vaginal thrush, a sexually active man who develops symptoms should still self-treat as he may reinfect his partner. Recurrent thrush in women may be caused by repeated reinfection by the man and these women should be encouraged to discuss this with their partners.

Pfizer Consumer Healthcare was the first OTC manufacturer to extend its licence for Diflucan One to include treatment of male partners. At the end of March, Bayer capitalised on this opportunity by introducing Canesten Oral, a fluconazole 150mg capsule aimed at treating penile thrush and at the same time targeting female thrush sufferers who want an oral treatment.

The focus on male thrush has raised awareness of the condition and provided pharmacists with an opportunity to expand on profit potential within the thrush category. In February, the packaging for Diflucan One changed to reflect this new indication and to make it

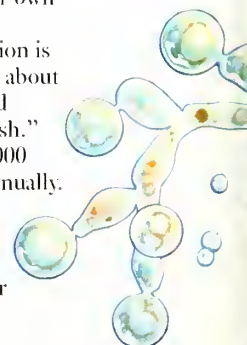

clear that the treatment is aimed at thrush symptoms in both sexes. The patient information leaflets were also changed to include balanitis and to enable pharmacists to inform men about the condition and help reduce the embarrassment surrounding it.

Dr Ian Banks, president of the Men's Health Forum, supports the extended indication for associated balanitis. "Men can find it difficult to talk about taboo health issues such as thrush, let alone seek advice and treatment from the pharmacy. Initiatives like this which encourage open discussion about 'embarrassing' problems and empower

Conditions associated with fungal infections can be difficult for customers to talk about in the pharmacy. Fawz Farhan examines how you can help and assesses recent product developments

men to take responsibility for their own health should be welcomed by pharmacists. Training and education is essential for men to feel confident about asking the pharmacist for help and advice on how to treat penile thrush."

According to Pfizer, some 710,000 packs of Diflucan One are sold annually. Alison Bull, product manager for Diflucan One, says: "Extending the indication for 'associated balanitis' is a great opportunity for pharmacists to capitalise on the expanding men's health market in

Continued on page 32 ►

ONE RASH DECISION YOU WON'T REGRET

When it comes to treating sweat rash, you can't choose a more effective answer than Canesten Hydrocortisone.

That's why it's the number 1 pharmacy recommendation for sweat rash.¹

Nothing is more reliable for rapidly soothing irritated, inflamed skin and clearing the fungal infection at the source of the problem.² Canesten Hydrocortisone makes common sense for sweat rash.

Product Information for Canesten Hydrocortisone. Canesten Hydrocortisone cream contains 1% w/w clotrimazole and 1% w/w hydrocortisone. **Indications:** Athlete's foot and candidal intertrigo where existing symptoms of inflammation require rapid relief. **Dosage and Administration:** Apply thinly and evenly to affected area twice daily and rub in gently. **Contra-indications:** Use on face, eye, mouth or mucous membranes; broken or large areas of skin; cold sores or acne, for treatment period longer than 14 days; hypersensitivity to ingredients. Do not use in the following unless prescribed by doctor: children under 10 years; pregnancy and lactation; on ano-genital area; to treat ringworm or secondary fungal infections. **Warnings and Precautions:** Long-term continuous therapy to extensive areas of skin could

be avoided. Avoid covering treated area with tight dressing. **Side-effects:** On rare occasions of irritation very rarely, patient may find irritation intolerable and stop treatment. Hypersensitivity reactions. **Legal Category:** P. **Cost:** £4.79. **MA Holder:** Bayer plc, Consumer Care Division, Newbury, Berkshire RG14 7JA. **Product Licence Number:** PL00100216. **Date of Preparation:** May 1995. **References:** 1. IMS Health - Self Medication UK Feb 2003. 2. Lszlay M, Mon CP Haut 1995; 7: 1-10.

Canesten® Can

pharmacy. We are making significant investment in training and education as the pharmacist will play a critical role in advising men on a subject which has previously been predominantly female focused."

Stamp out athlete's foot

Athlete's foot affects as many as 10-15 per cent of the population at any one time. Although such foot problems are not limited just to athletes, they can be a real issue for people training for and running a marathon. To target the 37,000 runners at this year's Flora London Marathon, Johnson & Johnson MSD Consumer Pharmaceuticals has produced a consumer leaflet with basic tips on keeping feet healthy.

Stay a Step Ahead of Athlete's Foot and Sweat Rash

is packed with hints, tips and advice about preventing and treating athlete's foot and sweat rash, common complaints for people running the marathon.

J&J MSD Consumer Pharmaceuticals uses two antifungals in its Daktarin range. Daktarin Dual Action contains miconazole and comes as a cream, powder or spray and is aimed at athlete's foot only. Daktacort HC contains a

Lamisil AT Spray has shown 36 per cent growth since its introduction last April

combination of miconazole and hydrocortisone while Daktarin Gold contains ketoconazole. Both of these are indicated for athlete's foot and sweat rash.

Novartis Consumer Health has Lamisil AT Spray and Lamisil AT Cream in its OTC portfolio for athlete's foot. The cream takes 48 per cent in sales in the total athlete's foot category with a 14 per cent growth year-on-year. The spray, which was introduced last April, takes 15 per cent share but with a 36 per cent growth.

Lisa Sharrat, brand manager for Lamisil, says the spray has proved popular because of its convenience. "A lot of people don't like using their fingers to apply cream to affected areas. This is especially so for sports people."

For the marathon, Ms Sharrat says pharmacists can give runners a range of advice before and after the event to help with any exacerbation of athlete's foot.

Carnation Footcare has a range of antifungal products for athlete's foot which includes Carnation Athlete's Foot Cream containing clotrimazole, Carnation Antifungal Wipes containing tolnaftate and Carnation Antifungal Spray, also containing tolnaftate.

Carnation Footcare chiropodist Kimby Osborne outlines how its products are designed to be used together: "Athlete's foot is a condition that can recur, so Carnation Athlete's Foot Cream should be continued until the infection has been thoroughly treated. Athlete's foot treatment should be recommended in conjunction with antifungal wipes and sprays which keep feet clean and free of fungus and protect against further infection. Once the

athlete's foot treatment is finished, antifungal wipes and spray should become a regular part of a healthy feet regime. They are perfectly designed to pop in a gym bag to use after sport to reduce the risk of infection in changing rooms or from damp towels and socks."

Marketing activity

Canesten has its heritage in treating fungal infections. Apart from the Canesten gynaecological products for thrush, Bayer also markets Canesten AF for the treatment and prevention of athlete's foot and Canesten Hydrocortisone for sweat rash.

Canesten Hydrocortisone is positioned as the number one treatment for sweat rash (IC Nielsen data Nov/Dec 2002). The condition is also known as candidal intertrigo because it is caused by a *candida*.

Canesten Hydrocortisone is being supported by a consumer campaign running from May and throughout the summer. It will focus on advertorials in key women's publications and gym posters targeting sporty women at risk of developing sweat rash.

Canesten product manager Penny Curtis says pharmacy recommendation has been instrumental in the success of these products and was highlighted by recent research revealing that 40 per cent of consumers hear about Canesten Hydrocortisone through a pharmacist. "In 2003, as in 2002, the Canesten AF and Canesten Hydrocortisone campaigns will focus on providing the pharmacist with essential information on the products in the range and their indications to provide effective recommendation," says Ms Curtis.

The Carnation Footcare range includes Athlete's Foot Cream

Focus on balanitis

Like vaginal thrush, penile thrush or balanitis is caused by a *Candida albicans* infection. This yeast-like fungus is found naturally in the mouth, gut or on the skin of 30-50 per cent of the healthy population. About 20 per cent of women will have the fungus inside the vagina without any symptoms of infection. *Candida* becomes infective when the natural flora of the body is unbalanced. Examples of this include antibiotics, reduced immunity, pregnancy, the contraceptive pill, diabetes, stress and tight clothing that promote a warm and airless environment.

A man who presents with these symptoms and whose partner has been diagnosed with vaginal thrush can be treated over the counter with oral fluconazole. However, men should be referred to their general practitioner if they have abnormal discharge, penile sores, the penis develops an unpleasant odour or symptoms do not clear within a week of treatment.

The main symptoms of penile thrush are inflammation, redness and irritation around the head of the penis, leading to itching and soreness. However, it may also be asymptomatic. The condition occurs commonly in uncircumcised men as the environment under the foreskin is warm and moist, conditions that encourage the growth of *candida*.

Lisa Sharrat, brand manager for Camisil, says it will be focusing on pharmacy this year: "At Novartis Consumer Health our focus is twofold. We want to raise awareness of the condition in order to aid sufferers in identifying that they have athlete's foot, which is not only uncomfortable but also highly contagious. But also, we will continue to support pharmacists and chiropodists in their important role as community advisers."

The pharmacist's role in the antifungal market

Conditions associated with fungal infections are generally embarrassing for

sufferers to discuss in the open environment of the pharmacy. Discretion by all pharmacy staff is crucial therefore when advising on the best treatments for vaginal and penile thrush, athlete's foot and sweat rash, for example.

According to Canesten, three out of four women will suffer from thrush at some point in their lives and 91 per cent of women who suffer from external symptoms will also have an internal thrush infection. Yet only a fifth of these will treat the external and internal symptoms. The pharmacist and pharmacy staff can educate customers on the benefits of treatment using a combination of products

to bring about immediate relief.

Bayer has produced a Canesten *Embarrassment* booklet which tackles embarrassing dermatological and gynaecological problems from the perspective of both the pharmacist and the customer. A copy can be obtained from Grayling PR, 1 Bedford Avenue, London WC1B 3AU.

The Canesten Health Advice Line (0845 758 5030) and the website at www.canesten.co.uk provide a further information source.

Daktarin has produced a leaflet offering advice on athlete's foot which includes money off coupons for the range

Other product news

J&J MSD Consumer Pharmaceuticals is supporting Daktarin with heavy consumer education support at two events this spring.

This weekend (April 13), the manufacturer is supporting the Flora London Marathon and has produced a new Daktarin leaflet, *Stay a Step Ahead of Athlete's Foot and Sweat Rash*.

Produced in full colour, the leaflet is packed with hints, tips and advice about preventing and treating athlete's foot and sweat rash. The leaflet will feature money off coupons for the Daktarin range, as a way of encouraging consumer trial and reinforcing the brand's commitment to runners.

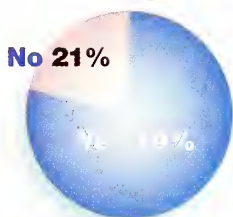

Free copies of the leaflet are available from the Pfizer Consumer Healthcare Advisory Bureau on 02380 628274.

In 2003, the Canesten brand celebrates 30 years of being on the market and treating fungal infections such as thrush, athlete's foot and sweat rash. Tel: Bayer Consumer Care on 01635 563000. 

IntraPharm Q provided an insight into the role of pharmacists in the antifungal market as follows:

Sample size: 165 UK pharmacist respondents

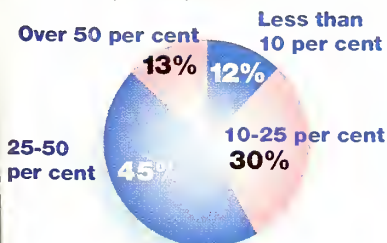

Do you merchandise all self-selection antifungal preparations together?

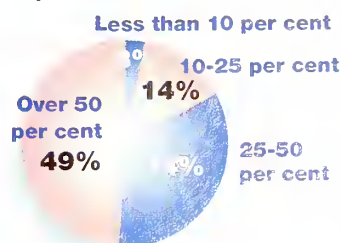

Do you merchandise all P-category antifungal preparations together behind the counter?

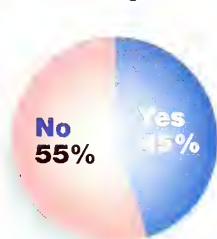

What percentage of your customers ask for a specific product?

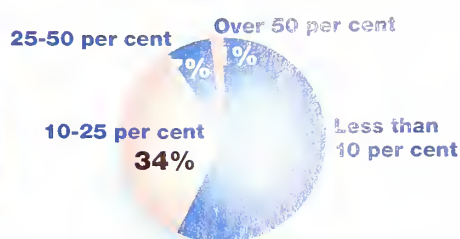

What percentage of your customers ask you for a recommendation?

Do you have any point of sale material for antifungals?

For vaginal thrush, what percentage of women use an oral preparation?

FREE LEGAL ADVICE

Chemist & Druggist's web site –
www.dotpharmacy.co.uk – has
introduced a service that offers
pharmacists free legal advice from
a leading solicitors' firm.

The service – dotLaw – is being run with the
co-operation of Charles Russell, whose specialist
legal fields include pharmacy matters.

Pharmacists are advised to e-mail their questions to –
phamlaw@cmpinformation.com – along with their full name
and the name of their pharmacy. The latter two details
are for C&D's records only – pharmacists' identities will
be kept anonymous when the answers are published.
All the questions and Charles Russell's replies, which
will be available in two working days, will appear on
a new dotPharmacy page called dotLaw.

Paul McAllister

Leo van Aken

Paul McAllister has been promoted to director of sales at Mawdsleys. He will take responsibility for the sales teams at both Mawdsleys and Doncaster Pharmaceuticals. He formerly headed up Mawdsleys' sales operation and has been with the company for four years. He will be assisted by two new regional managers. **Nigel Milligan** becomes southern regional sales manager and **Mark Brockhouse** becomes

northern regional sales manager.

Munro & Forster Communications has announced that Alison Munro has retired from her position as chairman. Her business partner of 13 years **Brian Gunson** becomes

chairman and majority shareholder at M&F, while **Julie Flexen** becomes sole managing director. **Sarah Hart**, director of prescription medicines, becomes deputy managing director.

Leo van Aken has joined the senior management team of KIS/Photo-Me Group where he will work in close collaboration with **Pierre Buendia**, international director of the Group's minilab division.

Hospice help from a peak practice

A hospice in Lichfield, Staffs has benefited from a donation of £1,125 from the pharmacy division of the West Midlands Co-op.

The St Giles Hospice was given the money raised from a trek by a team from the pharmacy who completed the 25-mile Three Peaks Challenge in the Yorkshire Dales.

On the hike were superintendent pharmacist Paul Byrne, his wife Sian – a pharmacist at the Co-op's Walsall Wood pharmacy – Julie Sheldon, retail operations manager for the pharmacy group, her husband James, manager of the Co-op's Stourport food store, Alex Atkins and Marie Ashcroft.

The money raised was presented at the Greenhill Health Centre pharmacy in Church Street, Lichfield where Paul was manager for nine years. "The challenge was a great experience and we really enjoyed taking part, except for the blisters," said Paul.

Paul Byrne, Superintendent of West Midlands Co-op's Pharmacy Division, presents Laura Pennycook, Appeals Co-ordinator for St Giles Hospice, with a cheque for £1,125 raised for completing the Three Peaks Challenge

Opportunities for hawkish advertisers

Keen *C&D* readers will recall that last month we mooted the idea that the *Who Wants to be a Millionaire?* coughing trial would be a perfect advertising opportunity for one of the OTC cough medicine manufacturers.

Now a second dream advertising opportunity has been brought to our attention from *The Guardian*, which may suit the manufacturer of a certain hair re-growth product. Hair goes...

"A Harris hawk has been barred from falconry displays at Thorp Perrow in North Yorkshire after flying off with a spectator's toupee under the impression that it was prey."

C&D invites readers who spot any further such opportunities to send them in to chemdrug@cmpinformation.com

Cystitis campaign is complete pants!

Top celebrities are going to be revealing their taste in knickers for a campaign to educate women about how to cope with cystitis.

Among those already pledged to design a pair of knickers for the Smarty Pants campaign are Tamsin Outhwaite, Sophie Ellis Bextor, Carol Smillie, Laurence Llewelyn-Bowen, Lorraine Kelly and Patsy Palmer.

The campaign has been launched by Cystopurin in

support of WellBeing, the health research charity for women and babies.

The company will donate £250 to WellBeing for each pair of knickers received and the celebrity Smarty Pants will also be auctioned off, with all funds going to WellBeing.

According to Roche Consumer Health, four women out of five will suffer from cystitis at some stage in their lives.

A double entendre or two

The prurient British have sublimated their fear of all things natural into smutty smiles at the mere suggestion of something risqué.

Hence our delight when we received a press release from Durex. We just wonder whether the following quotes were intended:

"We have developed Performa and Sensation condoms in response to increasing consumer demands ..." and: "Recent Durex

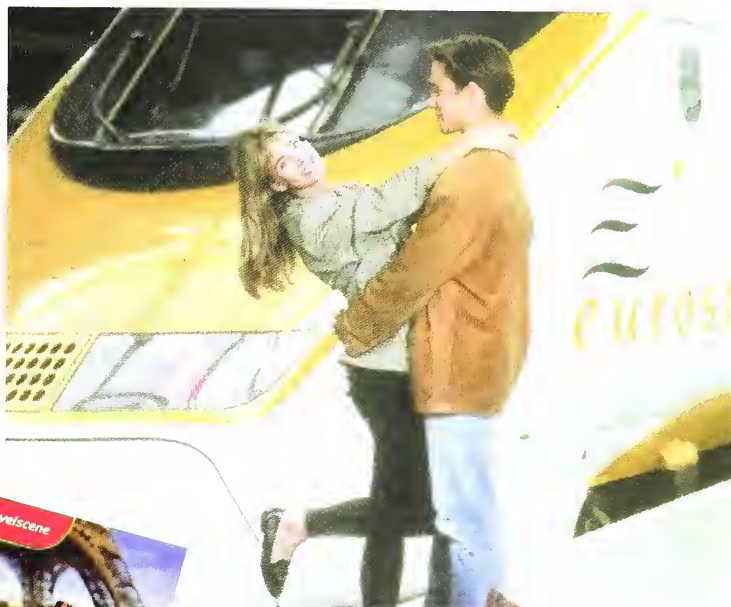

survey results revealed that sex lasts an astonishing 53 per cent longer with the new Performa condom, and an overwhelming 80 per cent of those surveyed said they would use the condom again.

We are not sure whether Durex recommends a rinse cycle. As for third but potentially messier quote we have our standards, you know

Win a great Eurostar citybreak for two

This superb Pharmacy Travel prize is arranged in conjunction with Travelscene – the leading shortbreak specialists. The winners can choose from two great destinations – Amsterdam or Brussels

Amsterdam is possibly the most vibrant and cosmopolitan city in Europe – a beautiful, unique destination which always leaves visitors with fond and lasting memories. The Dutch are exceptionally hospitable and much of the city's life and charm can be experienced on the streets – where bicycles and trams remain the most popular mode of transport. The impressive

Rijksmuseum is home to one of the world's great art collections and you must also see Anne Frank's House and the Floating Flower Market.

Brussels is dominated by the Grand Place, where you will find Gothic, Renaissance and Baroque in one splendid square. Surrounding Grand Place are tiny streets lined with restored Belle Epoque houses. Food buffs say the local cuisine

rivals Paris, and as Brussels is also famous for its chocolate museum this is certainly no place for slimmers!

The prize is for a couple and can be taken between November 1 to December 15, 2003 (subject to availability). It includes return travel from Waterloo or Ashford to Brussels by Eurostar (for Amsterdam onward high-speed rail travel is also included), two nights in a centrally situated four-star hotel, continental breakfast and all tax/service charges.

Pharmacy Travel guarantees year-round savings

A combination of generous discounts and exclusive offers always ensures excellent cost savings on:

BIG
profit opportunity

BIGGER
service offering

BIGGEST
ever spend on TV and Press

£7million

Kodak Pictures will have huge exposure throughout 2003 with the biggest ever spend yet on TV advertising, starting in April. That's a huge £7 million in total, including national press.

There's also free signage, Point of Sale material and a year-long series of business development promotions.

Kodak Pictures now offers your customers an even bigger service, with the option of getting great prints from both film or digital media, including camera cards.

The prints come in a unique storage box on premium *Kodak Royal* paper with an index print. There's also the option of Picture CD.

Your customers will love the enhanced service and with this huge spend behind Kodak Pictures, you'll love the increased revenue and profit.

Kodak Pictures

Kodak is putting a fantastic £7 million into the development of your photo processing business.

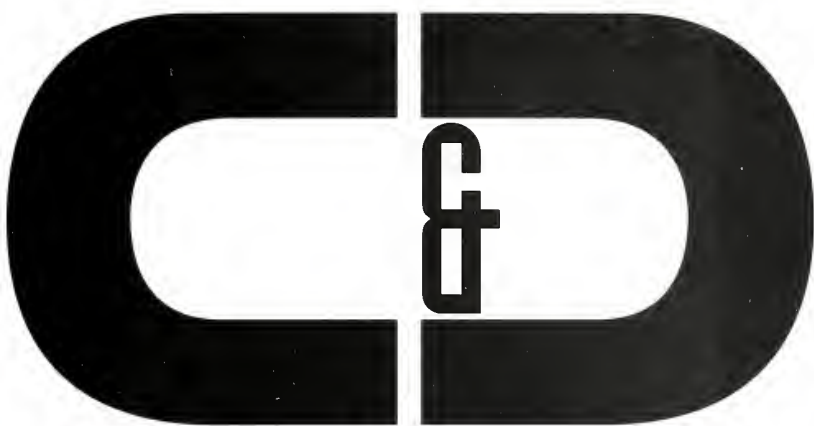

Share Moments. Share Life.™

PIP Codes for Wholesaler's Internal Use	6
PIP Codes for generics	7
PIP Codes for Appliances	60
Wholesalers/Distributors list	62
Suppliers	64
Disallowed Dressings & Appliances	67

Who makes what: a unique source list

This C&D Generics Supplement not only lists the seven-digit PIP Codes, so providing buyers with a unique source list for unbranded lines in pack sizes ranging from counter and dispensary to small-scale manufacture, but also lists the PIP codes which have been allocated to users for their own internal use.

The list is arranged so that users can trace alternative suppliers easily, and at the same time have the relevant PIP Code for ordering and product identification. Entries are updated in the weekly Price List Supplement when changes are notified to C&D by manufacturers. C&D would be pleased to receive details in writing, of any packs not currently listed and for which codes are required.

As far as possible, the following compilation rules have been observed:

1. When the PIP code was converted from six to seven digits, a zero was placed before the old number, so retaining the existing check digit.

2. New PIP Codes are allocated randomly as under the six figure system and start with "1".

3. In the interest of continuity, priority in re-allocation of existing codes has been given to suppliers whose products carry the PIP Code on their packs.

4. Entries are generally under pharmaceutical name in order to bring all suppliers together for maximum buyer choice. However, counter packs will often be labelled with a popular synonym (eg Gee's linectus, Whitfields ointment). A cross-reference has been provided whenever products are shown under a synonym in suppliers' lists.

5. The "DT" symbol indicates Drug Tariff pack sizes, which have been taken from the March 2003 edition.

The PIP Code

History

The benefits of a common code for pharmacy products have been long recognised, and over the years various working parties recommended the creation of such a code. In 1982 the National Pharmaceutical Association, in conjunction with Benn Publications (publishers of *Chemist & Druggist*), created the PIP Code in which they now hold joint copyright. This move had the support of several major pharmaceutical wholesalers.

Definition

The PIP Code is a product identifying number which has been allocated to goods distributed through pharmacies. All types of products are included and every pack size and colour or other variation has its own unique PIP Code number. The codes are published alongside each product entry in the *Chemist & Druggist* monthly Price List and weekly supplements, ensuring that a readily accessible and up to date PIP Code reference is widely circulated.

Initially, a six-digit code was chosen for ease of keyboard entry, but demand for the PIP coding system has necessitated the introduction of a seven-digit code. The last of these digits is a check digit (see p5) to minimise errors in recording.

Uses

The individual computer systems operated by manufacturers, wholesalers and retailers can be interfaced to recognise the PIP Code, which therefore provides a common language. This enables the retailer to

retain a freedom of choice of supplier and makes it possible for all involved in the distribution chain to benefit from streamlining their communications and merchandise handling systems.

Initially the PIP Code was used mainly as an interface between retailer and supplier for the purpose of placing and receiving orders, and virtually all pharmaceutical wholesalers can now recognise PIP Code when transmitted electronically. However, within retail pharmacy it is used increasingly for stock control and point-of-sale data capture. Most computer bureaux handle PIP Code data for clients, and many EPOS and dispensary systems make use of the PIP Code facility.

Computer users who choose to adopt the PIP Code as the primary code for their systems can avoid the time and expense of maintaining their own database. This is a considerable advantage to smaller businesses and pharmacies which have only limited clerical resources.

Developments

Requests for further information on the Code's use, and licence applications etc, should be addressed to:

Mr Richard Maw
PIP Code Administrator
National Pharmaceutical Association
Mallinson House
40-42 St. Peter's Street
St. Albans
Herts AL1 3NP
Tel: 01727 832161

PIP Code principles

The Pharmaceutical Interface Products Code Regulatory Authority is the National Pharmaceutical Association, which takes advice from a technical panel representing retail and wholesale PIP Code users, plus *Chemist & Druggist* (who maintain the NPA's master PIP Code file).

The code is based on computer codes used to maintain the *C&D* Price Service but has been augmented to incorporate a number of product categories not considered appropriate for publication in the *C&D* monthly Price List (such as some watches, confectionery, stationery).

Code users may find the following points of policy helpful:

General

1. Manufacturer and distributor codes are published in Section 2 of the *C&D* monthly Price List.
2. Within the seven-digit PIP Code, codes have been reserved for users' own requirements (see para 12), but some wholesalers have allocated part of the series to "service" items such as bags and bottles. Retailers should obtain details of such allocation from their usual suppliers before using this series as dump codes etc.
3. Discontinued items are deleted from the *C&D* Price List upon notification by the manufacturer but remain on the master file for reference. If a product is re-marketed by the same supplier within that period, every effort is made to use its former code.
4. Where there are minor adjustments to pack sizes the existing code is generally retained to help retailers monitor sales performance. When the trade unit alters there is no requirement to issue new codes.
5. Both branded and generic product codes can be issued in advance of product launch with full security and confidentiality. The allocated numbers are reserved on the *C&D* computer pending advice of launch. Manufacturers of ethicals are particularly asked to use this facility so that codes can be notified on their standard letter to wholesalers. Intercontinental Medical Statistics (IMS) and *Chemist & Druggist* have available a joint form (approved by ABPI and BAPW) for prior allocation of both SDA and PIP codes. *C&D* has its own PIP Code allocation request form for use by manufacturers who do not require a SDA code.

Variants

6. Products which have no variants (colour, flavour, etc.) are identified by a separate "main" code for each pack size, representing singles wherever possible. This code appears immediately before the trade price column in the *C&D* Price List.
7. Where products include variants the "main" code does not appear - instead there are individual codes in italic type beneath the entry. However, the "main" code is allocated to a variant (e.g. neutral, normal, white, original, small etc) in order to reduce confusion for code users.
8. Where variants are added to an existing range the "main" code will normally be retained as the variant code for the original version. If this variant is subsequently discontinued its code will remain the "main" code but will no longer be published.

Special cases

9. PIP codes for unbranded products are shown in the *C&D* Generics Reference Book, distributed free to all *C&D* subscribers, additional copies are available on request. This supplement also lists wholesalers accepting PIP Code for ordering purposes. Generic Suppliers and Disallowed Dressings and Appliances section. Note: Branded generics (ie, where a prescription calling for the brand name alone is sufficient to identify absolutely the product required) are to be found in the *C&D* Monthly P. L. Branded products with a single generic ingredient are listed in the generics book under the generic name.

012-2156
PIPCODE
U1Z-3430

10. Certain surgical/sundries groupings are at present not fully covered by PIP Code. This applies particularly to products where the multitude of size and type variations is great and/or product developments are frequent, so that retailers are likely to rely on manufacturers' product number or full description for ordering from a wholesaler. However, some of the more standard and frequently prescribed brands and generic items (eg many NHS appliances) are coded in the *C&D* Price List and the Generics Supplement.

11. Products with an HP indication are packs and preparations only supplied to hospitals. Products are coded if manufacturers anticipate them being prescribed to out-patients.

12. Promotional products are coded using the 500-000 series. The categories for coding are 'Banded packs'; 'Price Marked packs' & 'counter/merchandise units'. These products are listed at the back of the supplement, and cumulate through the month before appearing in the back of the monthly price list. Temporary and seasonal packs are not coded by *C&D*. Codes within the 600-0000 are used by wholesalers etc., in accordance with the batches allocated to them by *C&D*, for their internal use. Retailers should use the 900-0000 series.

Check-digit calculation

The check (seventh) digit of the PIP Code is arrived at by the following calculation:

1. Take each digit starting with units position then tens position and so forth and multiply by 1,2,1,2,1,2, etc.
2. Add up resultants of 1. (Add the digits not the products ie if resultant is two digits then add them together).
3. Subtract the figure at 2 from the next highest multiple of 10.
4. Answer is the modulus 10 check digit. If no remainder then check digit is zero.

To check

1. Take each digit (including check digit) and multiply by 1,2,1,2,1,2 (starting in units position).
2. Total resultants as before.
3. Answer should be an exact multiple of 10.

Example

$$\begin{array}{rcl}
 & 3 & 5 & 8 & 9 & 2 & 5 & \text{(original number)} \\
 & \times 1 & \times 2 & \times 1 & \times 2 & \times 1 & \times 2 & \text{(multipliers)} \\
 = & 3 & 10 & 8 & 18 & 2 & 10 & \text{(resultants)} \\
 = & 24 & & & & & & \text{(sum of digits)} \\
 & 3 + 1 + 0 + 8 + 1 + 8 + 2 + 1 + 0 & & & & & & \\
 30 - 24 & & & & & & & \text{(subtract from next multiple of 10)} \\
 = & 6 & & & & & & \text{(this result is the modulus 10 check digit)}
 \end{array}$$

Check

$$\begin{array}{rcl}
 & 3 & 5 & 8 & 9 & 2 & 5 & 6 & \text{(PIP code number)} \\
 & 3 & 10 & 8 & 18 & 2 & 10 & 6 & \text{(resultants)} \\

Coding queries

Coding queries related to products published or to be published in the C&D Price List and Generics Reference Book should be addressed to Colin Simpson, Price List Controller, Chemist & Druggist, CMP Information Ltd, Sovereign Way, Tonbridge, Kent TN9 1RW (telephone 01732 377407).

Queries relating to codes held on the master file should also be addressed to Colin Simpson at the above address.

Matter of policy should be referred to Mr Richard Maw, PIP Code Administrator, National Pharmaceutical Association, Mallinson House, 40-42 St. Peters Street St. Albans Herts AL1 3NP (telephone 01727 832161) from whom, for NPA members printouts of the master file in alphabetical or numerical order may be purchased. Non-members can apply to C&D direct.

The PIP Code copyright is owned by CMP Information Ltd (publishers of *Chemist & Druggist*) and the National Pharmaceutical Association is the licensed administrator.

Technical panel

The PIP Code technical/consultative panel, set-up by the National Pharmaceutical Association to advise it on code maintenance and development, is chaired by Mr Richard Maw of NPA and has the following members: Sonia Garner (NPA information department), Colin Simpson (C&D Price List Controller, responsible for maintaining the PIP Code master file, the issuing of PIP Codes and their publication through C&D Price Services), Patrick Grice (Editor of *Chemist & Druggist* magazine), Andy Charlesworth (representing Numark Ltd), Nick Jones (representing Gehe UK), Devyani Patal (representing UniChem plc), David Houghton (hospital representative), Col Michaels (independent retail pharmacist), Craig Spurdle (representing Phoenix Pharmaceuticals).

The *Chemist & Druggist* Monthly Price List and Weekly Price Supplement are available electronically. The database and update services are available in the form of a complete database; a partial database; or customised according to preferred product classifications. They are intended primarily for wholesalers and EPoS suppliers for onward transmission to clients, included is additional information such as EAN codes & till roll description, which cannot be reproduced in the printed C&D price list. For further details of costs and formats please ring 01732 377407/457, or fax 01732 377559 price list section.

PIP CODES FOR WHOLESALE/DISTRIBUTOR INTERNAL USE

1. The 600-0000 series of codes is available for internal use by wholesalers/distributors under the control of the C&D Price Service.
2. C&D Price Service will issue wholesalers/distributors with blocks of codes from within the 600-0000 series on request. Those codes will be exclusive to that wholesaler or distributor.
3. Wholesalers will issue and maintain codes for their own internal use from within the blocks issued to them by the C&D Price Service. When that block is used up they should apply to C&D for a further block.
4. Code blocks issued to each wholesaler/distributor will be published in the Generics Guide twice yearly and will be

5. PIP Code users and IT systems suppliers should refuse to accept PIP codes from any wholesaler/distributor that are outside their allocated block, and refer the originator to the C&D Price Service for a code block allocation.
6. In due course, administration of the 700-000 & 800-000 series codes will revert to the C&D Price Service. Wholesaler/distributor generated codes which are within the 700-000 & 800-000 series will no longer be recognised. Any product codes from these series that are still live should be recoded using a code from within the block issued. At least six months notice will be given.

Alphabetical List

Numerical List

Company Name	Numbers allocated	Numbers allocated	Company Name
B.J. Wilson Ltd	637-1000 to 638-0999	600-0000 to 619-9999	Lloyds Pharmacy

PIP CODES FOR GENERICS

The following section gives Pharmaceutical Interfaced Product codes (PIP codes) for drugs and preparations, etc., which pharmacists order mainly as generics. All packed sizes known to be readily available have been coded, including packs listed in Part VIII of the Drug Tariff (England and Wales).

A

Absolute Alcohol (dehydrated) (Martindale Pharms)

ampoules 2ml		
10	098-8444	
ampoules 5ml		
10	098-7768	

Acacia Food Grade (Loveridge)

250g	077-3663	
------	----------	--

Acebutolol (see SECTRAL)

Acebutolol (Milpharm)

capsules 100mg		
84	110-7549	DT
capsules 200mg		
56	110-7556	DT
tablets 400mg		
28	110-7564	DT

Acetazolamide (see DIAMOX, DIAMOX SR)

Acetazolamide (Regent Labs)

tablets 250mg		
100	052-3480	

Acetic Acid (see ACI-JEL, EARCALM)

Acetic Acid (Loveridge)

solution 33%		
500ml	102-2359	DT
2ltr	105-1655	

Acetic Acid (Thornton & Ross)

solution 33%		
500ml	077-3226	DT

Acetic Acid Dilute (Loveridge)

solution		
500ml	102-2367	
25ltr	105-1671	

Acetic Acid Glacial (Loveridge)

solution		
500ml	102-2375	
2ltr	102-2383	

Acetone (Hillcross Pharms)

500ml	100-4274	DT
2ltr	100-4688	

Acetone (Loveridge)

500ml	077-3630	DT
2ltr	106-0037	
technical		
500ml	077-3614	DT
2ltr	077-3606	
25ltr	077-3598	

Acetone (Numark)

At the beginning of some of the generic entries there is a further list of names in bold capital letters.

These names are of the brands which contain the single generic ingredient under which they are listed.

This information is to allow for easy cross referencing with branded equivalents in the main C&D Price List.

Ammonia Aromatic (William Ransom)

solution	500ml	105-3982	DT

500	102-5634	

At the beginning of some of the generic entries there is a further list of names in bold capital letters. These names are of the brands which contain the single generic ingredient under which they are listed.

This information is to allow for easy cross referencing with branded equivalents in the main C&D Price List.

Dosulepin (IVAX Pharms)

capsules 25mg		
28	108-0449	DT
tablets 75mg		
28	101-0602	DT

**Dosulepin (Kent Pharms)**

capsules 25mg		
28	109-3129	DT
tablets 75mg		
28	100-7269	DT

Dosulepin (Lagap Pharms)

tablets 25mg		
28	109-1701	
tablets 75mg		
28	108-5711	DT

Dosulepin (Sovereign Medical)

capsules 25mg		
28	109-2469	DT
100	108-7295	DT
tablets 75mg		
28	108-7303	DT

STERWIN MEDICINES

Dosulepin (Sterwin Medicines)

capsules 25mg		
100	104-8495	DT
tablets 75mg		
28	104-8503	DT

Dothiepin (see Dosulepin)**Doxazosin (see CARDURA, CARDURA XL, CASCOR)****Doxazosin (Approved Prescript. Service)**

tablets 1mg

DISALLOWED DRESSINGS AND APPLIANCES

A guide to both proprietary and non-proprietary items for which payment will not be made if dispensed against NHS prescriptions issued in England and Wales. Derived from the lists used by the PSNC Prescription Research Centre it includes extensive cross-referencing for quick access to particular products.

Abbreviated Prescribing Information

Name: LORATADINE 10mg Tablets and LORATADINE 5mg/5ml Syrup. **Active Ingredients:** Each tablet contains 10mg loratadine and each 5ml syrup contains 5mg loratadine. **Indications:** Relief of symptoms associated with seasonal and perennial allergic rhinitis, such as sneezing, nasal discharge and itching and ocular itching and burning. Relief of symptoms associated with idiopathic chronic urticaria. Syrup only: In children over 2 years of age, relief of symptoms associated with seasonal allergic rhinitis, such as sneezing, nasal discharge and itching and ocular itching and burning. The relief of symptoms associated with allergic skin conditions such as idiopathic urticaria. **Dosage & Administration:** For oral use. Tablets: Adults, the elderly and children 12 years of age and over: One 10mg tablet once daily. Syrup: Adults, the elderly, and children 6 years of age and over: 10ml syrup once daily. Children 2 to 5 years of age: 5ml syrup once daily. **Contraindications:** Hypersensitivity to loratadine or any of the other product ingredients. **Special Warnings & Precautions:** Tablets: none known; Syrup: safety and efficacy of Loratadine in children less than 2 years of age has not been established. **Interactions:** No potentiating effects were seen when alcohol was co-administered with loratadine as measured by psychomotor performance studies. As loratadine is metabolised by the hepatic cytochromes P450 3A4 and 2D6, concomitant therapy with drugs which inhibit or are metabolised by either system may elevate plasma concentrations of either drug and adverse reactions might result. Cimetidine, which inhibits both these enzymes, and erythromycin or ketoconazole, which inhibit P450 3A4, have been shown in studies to

increase loratadine concentrations, although no clinical or electrocardiographic adverse effects were observed. Other known inhibitors of the hepatic cytochromes P450 3A4 or P450 2D6 include quindine, fluconazole or fluoxetine. As antihistamines may prevent or diminish otherwise positive reactions to dermal reactivity indicators, loratadine tablets and syrup should be discontinued about four days prior to skin testing procedures. **Pregnancy & Lactation:** Pregnancy: Loratadine should not be administered during pregnancy. There is no experience of the use of loratadine tablets or syrup in human pregnancy. Loratadine was not teratogenic in animal studies, but at high doses some embryotoxic effects were observed. Lactation: Since loratadine is excreted in breast milk it should not be administered to lactating women. **Effects on ability to drive or operate machines:** None known. **Undesirable Effects:** No clinically significant sedative or anticholinergic properties. Adverse events such as fatigue, nausea, headache were reported rarely. Tachycardia and syncope have also been reported rarely though causality has not been established. Spontaneous adverse events reported rarely include: alopecia, anaphylaxis, abnormal hepatic function and supraventricular tachyarrhythmias. **Marketing Authorisation Holder:** Alpharma Limited, Whiddon Valley, BARNSTAPLE, N. Devon, EX32 8NS. **Product Licence Number:** PL0142/0479 (Tablets); PL0142/0493 (Syrup). **Legal Category:** P, POM (Tablets); P (Syrup). **Basic NHS Cost:** pack of 7 tablets, £2.20; pack of 30 tablets, £7.57; pack of 100ml, £7.57. **Date of Preparation:** January 2003.
